Stable Adaptive Systems Kumpati S. Narendra, Anuradha M. Annaswamy, 2012-07-12 This graduate level text focuses on the stability of adaptive systems and offers a thorough understanding of the global stability properties essential to designing adaptive systems Its self contained unified presentation of well known results establishes the close connections between seemingly independent developments in the field Prerequisites include a knowledge of linear algebra and differential equations as well as a familiarity with basic concepts in linear systems theory The first chapter sets the tone for the entire book introducing basic concepts and tracing the evolution of the field from the 1960s through the 1980s The first seven chapters are accessible to beginners and the final four chapters are geared toward more advanced research oriented students Problems ranging in complexity from relatively easy to quite difficult appear throughout the text Topics include results in stability theory that emphasize incidents directly relevant to the study of adaptive systems the stability properties of adaptive observers and controllers the important concept of persistent excitation the use of error models in systems analysis areas of intense research activity and five detailed case studies of systems in which adaptive control has proved successful

Deterministic Learning Theory for Identification, Recognition, and Control Cong Wang, David J. Hill, 2018-10-03 Deterministic Learning Theory for Identification Recognition and Control presents a unified conceptual framework for knowledge acquisition representation and knowledge utilization in uncertain dynamic environments It provides systematic design approaches for identification recognition and control of linear uncertain systems Unlike many books currently available that focus on statistical principles this book stresses learning through closed loop neural control effective representation and recognition of temporal patterns in a deterministic way A Deterministic View of Learning in Dynamic Environments The authors begin with an introduction to the concepts of deterministic learning theory followed by a discussion of the persistent excitation property of RBF networks They describe the elements of deterministic learning and address dynamical pattern recognition and pattern based control processes The results are applicable to areas such as detection and isolation of oscillation faults ECG EEG pattern recognition robot learning and control and security analysis and control of power systems A New Model of Information Processing This book elucidates a learning theory which is developed using concepts and tools from the discipline of systems and control Fundamental knowledge about system dynamics is obtained from dynamical processes and is then utilized to achieve rapid recognition of dynamical patterns and pattern based closed loop control via the so called internal and dynamical matching of system dynamics This actually represents a new model of information processing i e a model of dynamical parallel distributed processing DPDP
