**The Teaching of Science in Primary Schools** Wynne Harlen OBE, 2017-08-04 The Teaching of Science in

Primary Schools provides essential information for all concerned with primary school education about all aspects of teaching science. It pays particular attention to inquiry based teaching and learning because of the more general educational benefits that follow from using this approach. These benefits are often expressed in terms of developing general scientific literacy and fostering the ability to learn and the motivation to continue learning. This book also aims to help teachers focus on the big or powerful ideas of science rather than teaching a series of unrelated facts. This leads children to an understanding of the nature and limitations of scientific activity. This fully expanded and updated edition explores the compelling reasons for starting science in the primary school. Within school planning in the context of less prescriptive national requirements. The value of having in mind the big ideas of science. The opportunities for children to learn through greater access to the internet and social networking. The expanding sources of materials and guidance now available to teachers on line. Greater attention to school and teacher self evaluation as a means of improving provision for children's learning. The importance for both teachers and learners of reflecting on the process and content of their activities. Other key aspects of teaching such as questioning the importance of discussion and dialogue, the formative and summative roles of assessment and strategies for helping children to develop understanding, skills, positive attitudes and enjoyment of science are preserved. So also is the learner centred approach with an emphasis on children learning to take some responsibility for their activities. This book is essential reading for all primary school teachers and those on primary education courses.

*Developing Teaching Skills in the Primary School* Jane Johnston, John Halocha, Mark Chater, 2007-10-16 Teaching is a complex process which involves the development and utilization of subject knowledge and teaching skills. Containing reflective and practical skills, this book supports such development focusing specifically on teaching skills, considering what they are, how they develop and how they differ between age and subject. The book contains three sections: Planning, Doing and Reviewing, which demonstrate effective classroom practice. It uses examples of practitioners at different stages of their professional development to link theory and practice and includes discussions on contemporary issues in primary education such as Constructivist teaching and learning, Thinking skills, Creativity, Teaching and learning styles, Child centred learning. The authors provide a critical analysis of the issues, practice and problems faced by primary school teachers, which is supported by reflective tasks throughout the book. Emphasizing the child as a partner in the learning process and highlighting the importance of teaching for child centred learning, the book ultimately develops and strengthens the teacher's skills.

***Science in Primary Schools: Examining the Practices of Effective Teachers*** Angela Fitzgerald, 2012-10-19 If the status and quality of science education in schools is to improve efforts need to be made to better understand the classroom practices of effective science teachers Teachers are key players

in a re-imagining of science education. This book explores how two primary school teachers identified as effective practitioners approached science teaching and learning over a unit of work. In recording the teaching and learning experiences in their classrooms, the author highlights how the two teachers adopted different approaches drawing on their particular beliefs and knowledge to support student learning in science in ways that were appropriate to their contexts as well as reflected their different experiences, strengths and backgrounds. Through sharing their stories, this book illustrates that due to the complex nature of teaching and learning, there is no one way of defining effectiveness. In documenting this research, it is hoped that other teachers and teacher educators will be inspired to think about primary school science education in innovative ways.

**Time to Teach** Neville Bennett, 1981

[Science Literacy in Primary Schools and Pre-Schools](#) Haim Eshach, 2006-08-12

Science is more than a compilation of facts and figures, although one would not know that from observing classroom lessons in science in elementary schools in many parts of the world. In fact, there are those who argue that science is not appropriate subject content for the early grades of elementary school. There are many schools in which science is simply not present in the earliest grades. Even where science is taught in the earliest grades, it is often a caricature of science that is presented to the children. This book offers a vigorous, reasoned argument against the perspective that science doesn't belong in the early grades. It goes beyond that, in offering a view of science that is both appropriate to the early grades and faithful to the nature of the scientific enterprise. Dr Eshach is not a voice in the chorus that claims young children's developmental lack of readiness for such study. He believes, as do I, that in order to learn science, one must do science. At the heart of the doing of science is the act of exploration and theory formation. To do science, we must explore the ways in which the world around us looks, sounds, smells, feels, and behaves.
