## **Technology And Choice:**

**Technology Choices** Diane E. Bailey, Paul M. Leonardi, 2015-01-30 An analysis of the occupational factors that shape the technology choices made by people who perform the same type of work Why do people who perform largely the same type of work make different technology choices in the workplace An automotive design engineer working in India for example finds advanced information and communication technologies essential allowing him to work with far flung colleagues a structural engineer in California relies more on paper based technologies for her everyday work and a software engineer in Silicon Valley operates on multiple digital levels simultaneously all day continuing after hours on a company supplied home computer and network connection In *Technology Choices* Diane Bailey and Paul Leonardi argue that occupational factors rather than personal preference or purely technological concerns strongly shape workers technology choices Drawing on extensive field work a decade s worth of observations and interviews in seven engineering firms in eight countries Bailey and Leonardi challenge the traditional views of technology choices technological determinism and social constructivism Their innovative occupational perspective allows them to explore how external forces shape ideas beliefs and norms in ways that steer individuals to particular technology choices albeit in somewhat predictable and generalizable ways They examine three relationships at the heart of technology choices human to technology technology to technology and human to human An occupational perspective they argue helps us not only to understand past technology choices but also to predict future ones
