Technology And Perception:

Being and the Screen Stephane Vial,2019-11-12 How digital technology is profoundly renewing our sense of what is real and how we perceive Digital technologies are not just tools they are structures of perception They determine the way in which the world appears to us For nearly half a century technology has provided us with perceptions coming from an unknown world The digital beings that emerge from our screens and our interfaces disrupt the notion of what we experience as real thereby leading us to relearn how to perceive In Being and the Screen St phane Vial provides a philosophical analysis of technology in general and of digital technologies in particular that relies on the observation of experience phenomenology and the history of technology epistemology He explains that technology is no longer separate from ourselves if it ever was Rather we are as much a part of the machine as the machine is part of us Vial argues that the so called difference between the real and the virtual does not exist and never has We are living in a hybrid environment which is both digital and nondigital online and offline With this book Vial endows philosophical meaning to what we experience daily in our digital age In A Short Treatise on Design Vial offers a concise introduction to the discipline of design not a history book but a book built of philosophical problems developing a theory of the effect of design This book is published with the support of the University of N mes France

User Perception and Influencing Factors of Technology in Everyday Life Mesquita, Anabela,2012-08-31 An increasing amount of research is being developed in the area where technology and humans meet The success or failure of technologies and the question whether technology helps humans to fulfill their goals or whether it hinders them is in most cases not a technical one User Perception and Influencing Factors of Technology in Everyday Life addresses issues of human and technology interaction The research in this work is interdisciplinary ranging from more technical subjects such as computer science engineering and information systems to non technical descriptions of technology and human interaction from the point of view of sociology or philosophy This book is perfect for academics researchers and professionals alike as it presents a set of theories that allow us to understand the interaction of technology and humans and to put it to practical use
