## Central Nervous System

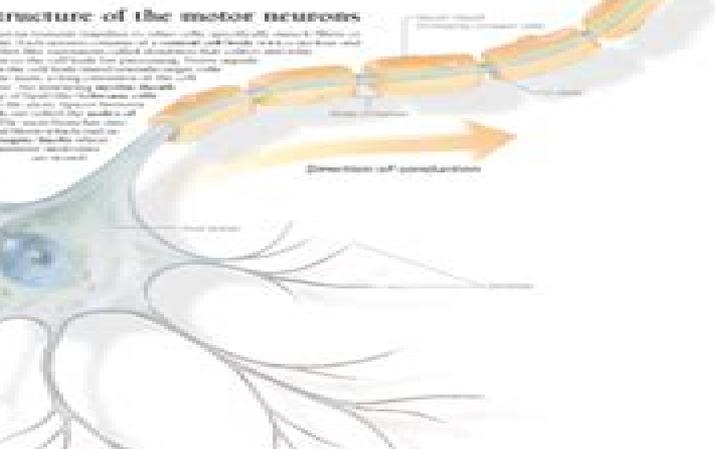

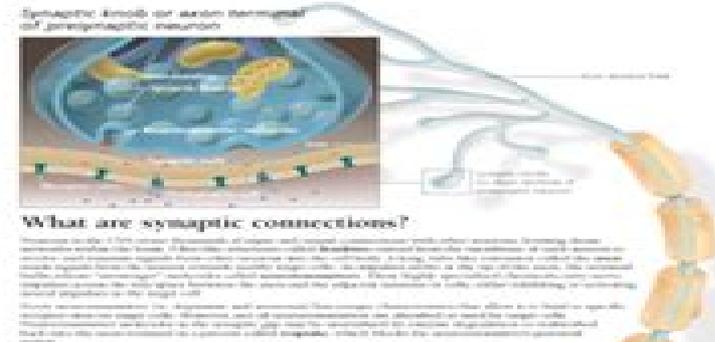

**What is the central nervous system?**

The central nervous system (CNS) is the part of the nervous system that is enclosed by the meninges and is composed of the brain and spinal cord. It is responsible for processing and coordinating sensory and motor information. The CNS is the main control center of the body, receiving information from the peripheral nervous system (PNS) and sending out instructions to the rest of the body. The CNS is made up of the brain and spinal cord. The brain is the part of the CNS that is located in the head, and the spinal cord is the part of the CNS that is located in the back. The CNS is responsible for all of the body's voluntary and involuntary actions.

**The spinal cord and nerves**

The spinal cord is the part of the central nervous system that is located in the back. It is responsible for processing and coordinating sensory and motor information. The spinal cord is made up of 31 segments. The brain is the part of the CNS that is located in the head, and the spinal cord is the part of the CNS that is located in the back. The CNS is responsible for all of the body's voluntary and involuntary actions.
