

^1H NMR Spectroscopy

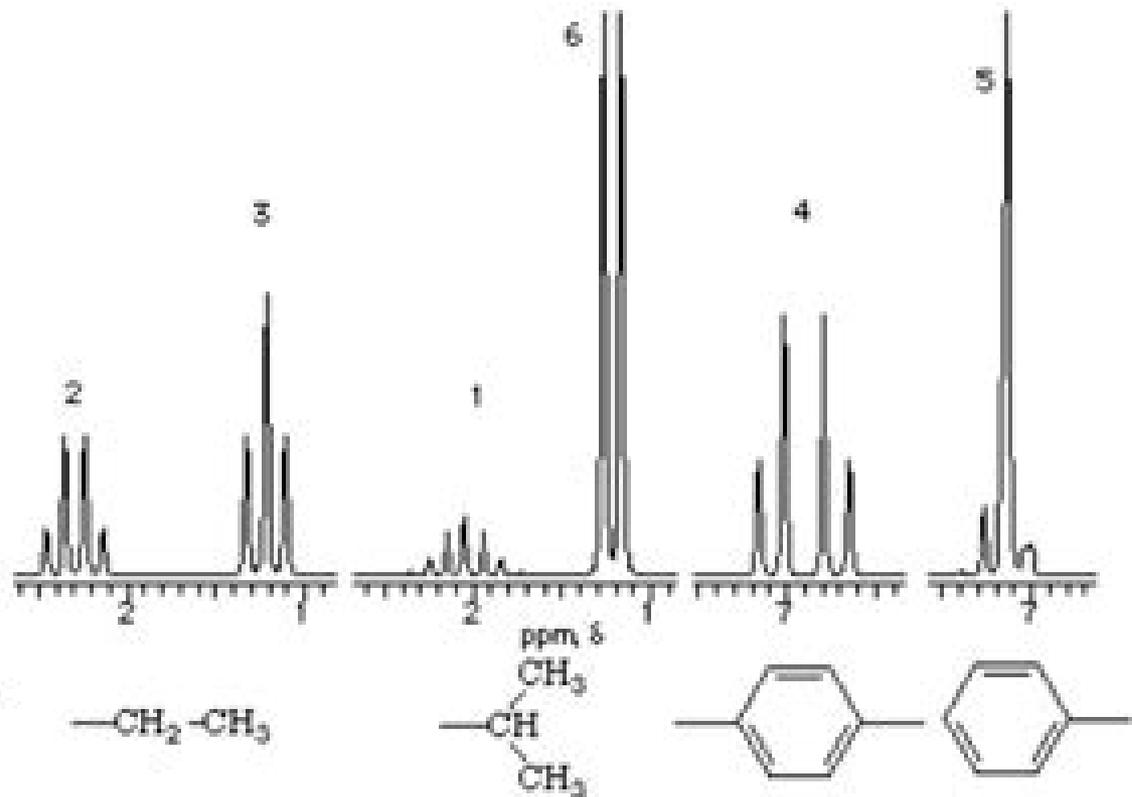

Spin-spin splitting: A resonance peak is split into $n+1$ peaks by n H atoms on adjacent atoms.

These are some simple, common splitting patterns:

Ethyl group is a quartet-triplet, integration 2:3

Isopropyl group is a septet (hard to see) and a doublet, integration 6:1

Para-disubstituted benzenes give this symmetrical splitting; other substituted benzenes are not well-resolved. Relative integrations are shown.

Understanding Nmr Spectroscopy:

Understanding NMR Spectroscopy James Keeler, 2011-09-19 This text is aimed at people who have some familiarity with high resolution NMR and who wish to deepen their understanding of how NMR experiments actually work This revised and updated edition takes the same approach as the highly acclaimed first edition The text concentrates on the description of commonly used experiments and explains in detail the theory behind how such experiments work The quantum mechanical tools needed to analyse pulse sequences are introduced set by step but the approach is relatively informal with the emphasis on obtaining a good understanding of how the experiments actually work The use of two colour printing and a new larger format improves the readability of the text In addition a number of new topics have been introduced How product operators can be extended to describe experiments in AX2 and AX3 spin systems thus making it possible to discuss the important APT INEPT and DEPT experiments often used in carbon 13 NMR Spin system analysis i e how shifts and couplings can be extracted from strongly coupled second order spectra How the presence of chemically equivalent spins leads to spectral features which are somewhat unusual and possibly misleading even at high magnetic fields A discussion of chemical exchange effects has been introduced in order to help with the explanation of transverse relaxation The double quantum spectroscopy of a three spin system is now considered in more detail Reviews of the First Edition For anyone wishing to know what really goes on in their NMR experiments I would highly recommend this book Chemistry World I warmly recommend for budding NMR spectroscopists or others who wish to deepen their understanding of elementary NMR theory or theoretical tools Magnetic Resonance in Chemistry

Protein NMR Spectroscopy John Cavanagh, Nicholas J. Skelton, Wayne J. Fairbrother, Mark Rance, Arthur G. Palmer III, 2010-07-21 Protein NMR Spectroscopy Second Edition combines a comprehensive theoretical treatment of NMR spectroscopy with an extensive exposition of the experimental techniques applicable to proteins and other biological macromolecules in solution Beginning with simple theoretical models and experimental techniques the book develops the complete repertoire of theoretical principles and experimental techniques necessary for understanding and implementing the most sophisticated NMR experiments Important new techniques and applications of NMR spectroscopy have emerged since the first edition of this extremely successful book was published in 1996 This updated version includes new sections describing measurement and use of residual dipolar coupling constants for structure determination TROSY and deuterium labeling for application to large macromolecules and experimental techniques for characterizing conformational dynamics In addition the treatments of instrumentation and signal acquisition field gradients multidimensional spectroscopy and structure calculation are updated and enhanced The book is written as a graduate level textbook and will be of interest to biochemists chemists biophysicists and structural biologists who utilize NMR spectroscopy or wish to understand the latest developments in this field Provides an understanding of the theoretical principles important for biological NMR spectroscopy Demonstrates how to implement optimize and troubleshoot

Introduction to NMR Spectroscopy Raymond John Abraham, J. Fisher, P. Loftus, 1988-11-24 Introduction to NMR Spectroscopy R J Abraham School of Chemistry University of Liverpool J Fisher Biological NMR Centre University of Leicester P Loftus Stuart Pharmaceuticals Delaware USA This book is a new extended edition of Proton and Carbon ^{13}C NMR by R J Abraham and P Loftus The initial chapters cover the fundamentals of NMR spectroscopy commencing with an explanation of how the nuclear magnetic response occurs followed by a detailed discussion of chemical shifts and coupling constants parameters not discussed to any length in other textbooks aimed at a similar level of interest Emphasis is given to the vectorial description of multipulse experiments as this is probably the easiest way to grasp how different information may be gained simply by changing a pulse sequence An understanding of multipulse NMR is a prerequisite for understanding 2D NMR The section on 2D NMR begins with a discussion of the resolved experiment This is a logical initial choice as the spectra produced by this experiment may be readily compared with 1D spectra Following on from this both heteronuclear and homonuclear correlation spectroscopy are described and examples given The final section of the book should be considered as an applications section It is aimed at showing the reader that NMR is not just of use to the synthetic organic chemist but is also of use to biochemists for investigating the solution state structure and function of proteins enzymes etc The application of high resolution NMR to the solid state is also discussed thereby indicating the developments which have taken place as far as spectrometer hardware is concerned
