Understanding, Influencing, and Utilizing Emotions Éric Laurent, 2024-07-10 Intelligence has long been a focal point and an explanatory framework of performance and behavior for researchers in psychology and cognitive science. However, the concept of intelligence has been explored through various metaphors and models. In 1990, Salovey and Mayer coined the term emotional intelligence (EI) with respect to a set of processes consisting of identifying and regulating emotions and more generally adapting behavior to this emotional context. Three decades later, this book compiles seven chapters introducing the most influential models of emotional intelligence, stressing the developmental trajectories that are related to EI dynamics as individuals age and delving into cognitive and neural activities associated with EI. Additionally, the book discusses the application of EI research to the contexts of everyday life choices, economic decision making, and neuropsychological practice. Altogether, the various chapters also provide the opportunity to reconsider the intricate nature of what has often been considered separately as cognitive and affective processes. **Journal of the American Dietetic Association**, 1930

Nontimber Forest Products in the United States Eric T. Jones, Rebecca Jean McLain, James F. Weigand, 2002 A quiet revolution is taking place in America's forests. Once seen primarily as stands of timber, our woodlands are now prized as a rich source of a wide range of commodities, from wild mushrooms and maple sugar to hundreds of medicinal plants whose uses have only begun to be fully realized. Now, as timber harvesting becomes more mechanized and requires less labor, the image of the lumberjack is being replaced by that of the forager. This book provides the first comprehensive examination of nontimber forest products (NTFPs) in the United States, illustrating their diverse importance, describing the people who harvest them, and outlining the steps that are being taken to ensure access to them. As the first extensive national overview of NTFP policy and management specific to the United States, it brings together research from numerous disciplines and analytical perspectives such as economics, mycology, history, ecology, law, entomology, forestry, geography, and anthropology in order to provide a cohesive picture of the current and potential role of NTFPs. The contributors review the state of scientific knowledge of NTFPs by offering a survey of commercial and noncommercial products, an overview of uses and users, and discussions of sustainable management issues associated with ecology, cultural traditions, forest policy, and commerce. They examine some of the major social, economic, and biological benefits of NTFPs while also addressing the potential negative consequences of NTFP harvesting on forest ecosystems and on NTFP species populations. Within this wealth of information are rich accounts of NTFP use drawn from all parts of the American landscape, from the Pacific Northwest to the Caribbean. From honey production to a review of nontimber forest economies still active in the United States, such as the Ojibway harvest of plants, recounted here, the book takes in the whole breadth of recent NTFP issues, including ecological concerns associated with the expansion of NTFP markets and NTFP tenure issues on federally managed lands. No other volume offers such a comprehensive overview of NTFPs in North America. By examining all aspects of these products, it contributes to the development of more sophisticated policy and management frameworks for not only ensuring their ongoing use but also
