

Understanding Heart Disease

Blood supply and the heart

The heart is a muscle that also depends on a continuous flow of oxygen and nutrients. The blood supply to the heart muscle is provided by the coronary arteries. The coronary arteries branch off from the aorta and travel to the heart wall.

How heart disease develops

Over time, the walls of the coronary arteries can become thickened with a deposit called plaque. The plaque, which contains cholesterol, causes the arteries to narrow and restrict blood flow to the heart muscle, leading to a heart attack and sometimes the underlying condition is coronary artery disease. If left untreated, coronary artery disease can progress from angina to congestive heart failure.

What is angina?

When the coronary artery is angina, a painful condition, temporarily reduced oxygen flow to the heart muscle. The pain is usually described as a squeezing or heavy pressure or fullness or discomfort in the chest. The pain may last for a few minutes and may be triggered by physical activity. Angina is a warning sign of a heart attack. It is not a disease, but a symptom of a heart attack. It is not a disease, but a symptom of a heart attack.

What is a heart attack?

A heart attack, or myocardial infarction, occurs when blood supply to part of the heart is blocked. The blocked artery causes the affected area of the heart muscle to die. This is a medical emergency. If you have a heart attack, call 911 immediately. The sooner you get treatment, the better your chances of survival. A heart attack can lead to congestive heart failure.

- Angina warning symptoms**
- Chest pain or pressure that is not easily tolerated and commonly follows physical activity or stress
 - Nausea, lightheadedness, sweating or feeling short of breath
 - Often relieved under 15 to 20 minutes
 - Similar sensation to indigestion or gas
 - Typically lasts no longer than 15 to 20 minutes
 - Radiating to shoulder, arm, jaw, neck or other areas

- Heart attack warning symptoms**
- Pain, lightheaded, or sensation of fullness or pressure in the chest that is not brought on by physical activity or stress
 - Chest pain radiating to the jaw, shoulder or arm
 - Shortness of breath
 - Nausea and vomiting
 - Pale, clammy skin
 - Weakness and light-headedness

Rhythmic disturbances

Disturbances in the heart's rhythm can be caused by a variety of factors, including stress, fatigue, and illness. These disturbances can lead to a heart attack or congestive heart failure. There are three main types of rhythmic disturbances: Atrial fibrillation, Ventricular fibrillation, and Heart block. Each type has its own set of symptoms and treatments.

- Arrhythmic warning symptoms**
- Signs of a rhythmic disturbance may include palpitations, often described as fluttering or a fast, irregular heart rate without other warning signs or as rapid or irregular
 - Other signs include pounding or racing heartbeat not related to exercise, repeated episodes of light-headedness or dizziness, sudden fainting spells, and sudden collapse, or life-threatening conditions.

Causes of coronary artery disease

The most common cause of coronary artery disease is atherosclerosis. This disease occurs when cholesterol and other substances build up in the arteries, narrowing them and restricting blood flow to the heart muscle. Other causes include smoking, high blood pressure, diabetes, and obesity.

Healthy lifestyle changes

Following a healthy lifestyle can help reduce the risk of heart disease. This includes eating a diet low in saturated fat and cholesterol, getting regular exercise, not smoking, and keeping your blood pressure and cholesterol under control.

What is congestive heart failure?

Congestive heart failure (CHF) is a condition in which the heart is unable to pump enough blood to meet the body's needs. This can lead to fluid buildup in the lungs and other parts of the body, causing symptoms such as shortness of breath, swelling, and fatigue. CHF is a chronic condition that requires ongoing medical treatment.

- CHF warning symptoms**
- The most common signs of congestive heart failure include:
 - Shortness of breath during regular activity (especially at night)
 - Swelling of the feet, ankles, or legs (edema)
 - Rapid weight gain
 - Nausea and loss of appetite
 - Increased heart rate
 - Difficulty breathing while resting or sleeping
 - Fluid buildup in the lungs, which can lead to coughing
 - Increased thinking and confusion
 - General fatigue
