Psychology and Mathematics Education Gila Hanna, Laura Macchi, Karin Binder, Laura Martignon, Katharina Loibl, 2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems Thus it is par excellence a model of rational inquiry Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades Indeed the Enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century Cognitive psychologists discovered that humans thoughts and actions often deviate from rules imposed by strict normative theories of inference Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather satisfice even when solving problem This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program In Simon's bounded

rationality and its direct descendant ecological rationality rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e g transitivity *Personal Epistemology and Teacher Education* Jo Brownlee, Gregory Schraw, Donna Berthelsen, 2012-05-23 *Personal Epistemology and Teacher Education* edited by Joanne Brownlee Gregg Schraw and Donna Berthelsen provides an international perspective on teachers personal epistemology or beliefs about the nature of knowledge and knowing Research from The Netherlands Cyprus Australia United States Canada Norway and Taiwan is presented to provide diverse viewpoints on personal epistemology for early childhood primary secondary and tertiary teaching contexts The text provides a platform for cutting edge theory and research about how personal epistemology can be applied to the context of teacher education thereby making explicit the connection between personal epistemology and teaching and students learning outcomes Topics include Cultural differences in teacher epistemology and the impact on students learning Teachers epistemological beliefs and inclusion Teachers epistemology and reading lessons citizenship education and teaching science Epistemology in a social context Teachers epistemological beliefs and student autonomy Teacher education and analysis of preservice and practicing teachers Implications of teachers epistemological beliefs Connections to future practice Teacher education and teacher behaviours are foregrounded across the topics with an emphasis on the origin and composition of teachers epistemological beliefs and how universities motivate change through formal teacher education Teaching behaviours are discussed in relation to how teachers beliefs are related to the curricular and pedagogical choices that they make in their classrooms assessment of learning outcomes and classroom management practices **Teaching for Deep Understanding** Kenneth Leithwood, Pat McAdie, Nina Bascia, Anne Rodrigue, 2006-04-28 This well researched resource draws on the collaborative work between researchers and school practitioners to offer teaching strategies that promote deep understanding and higher order thinking in students Understanding learning processes in language teaching Maria Cristina Larroque, 1972 Understanding Learning Janet Collins, Deirdre Cook, 2001-01-26 *Understanding Learning Influences and Outcomes* contains specially chosen material which brings together issues of theory and practice It invites teachers to examine review and research their own practice in their own personal context The book's significant contribution is that it re-emphasizes the multifaceted nature of education and deliberately takes a multidisciplinary approach It does this through a consideration of cultural political and theoretical perspectives in Education Section one shows something of the dilemmas tension and duality of thinking which is inherent in a concept of education for democracy Section two considers what it means to be a learner and how this knowledge force Making Distance Education Work S.
