Digital Urban Modeling and Simulation Stefan Müller Arisona, Gideon Aschwanden, Jan Halatsch, Peter Wonka, 2012-07-06 This book is thematically positioned at the intersections of Urban Design Architecture Civil Engineering and Computer Science and it has the goal to provide specialists coming from respective fields a multi angle overview of state of the art work currently being carried out It addresses both newcomers who wish to obtain more knowledge about this growing area of interest as well as established researchers and practitioners who want to keep up to date In terms of organization the volume starts out with chapters looking at the domain at a wide angle and then moves focus towards technical viewpoints and approaches

Modelling Urban Development with Geographical Information Systems and Cellular Automata Yan Liu, 2008-12-10 Urban development and migration from rural to urban areas are impacting prime agricultural land and natural landscapes particularly in the less developed countries These phenomena will persist and require serious study by those monitoring global environmental change To address this need various models have been devised to analyze urbanization a

Modelling urban spatial change: a review of international and South African modelling initiatives Chris Wray, 2013-08-30 Urban growth and land use change models have the potential to become important tools for urban spatial planning and management Before embarking on any modelling however GCRO felt it was important to take note of and critically assess lessons to be learnt from international experience and scholarship on spatial modelling as well as a number of South African experiments that model future urban development In 2012 GCRO initiated preliminary research into current international and South African modelling trends through a desktop study and telephone email and personal interviews This Occasional paper sets out to investigate what urban spatial change modelling research is currently being undertaken internationally and within South Africa At the international level urban modelling research since 2000 is reviewed according to five main categories land use transportation LUT cellular automata urban system dynamics agent based models ABMs and spatial economics econometric models SE EMs Within South Africa urban modelling initiatives are categorised differently and include a broader range of urban modelling techniques Typologies used include provincial government modelling initiatives in Gauteng municipal government modelling initiatives other government funded modelling research and academic modelling research The various modelling initiatives described are by no means a comprehensive review of all urban spatial change modelling projects in South Africa but provide a broad indication of the types of urban spatial change modelling underway Importantly the models may form the basis for more accurate and sophisticated urban modelling projects in the future The paper concludes by identifying key urban modelling opportunities and challenges for short to long term planning in the GCR and South Africa

Urban Modelling Michael Batty,2010-03-11 Originally published in 1976 this book introduced a series of mathematical models of urban phenomena relevant to scientists and planners attempting to understand and predict the form of cities and regions Dr Batty organises the book around the main theme of designing and using such models in practical situations and develops a family of static and dynamic models dealing with the location of land use and economic activities He describes the models both as urban theories and as computer algorithms and thoroughly explores the process of calibrating or tuning the models to reflect reality Problems concerning the definition of the spatial systems to which these models refer are examined as are other practical difficulties such as data organisation The quasi experimental approach which characterises this style of computer model building extends to using the models in conditional prediction and Dr Batty discusses their role in the planning process with their use in testing the impact of public policies on existing conditions

Models of Urban and Regional Systems in Developing Countries George F. Chadwick,1987 This work is concerned with the understanding of the structure and behaviour of urban and regional systems in developing countries Professor Chadwick considers not only how such systems change but also how they might be changed by some form of manipulation Both these purposes necessarily involve the activity of modelling the systems concerned This study has been enriched by the author s own experience in Bahrain Hong Kong Korea and Saudi Arabia
