This textbook provides a comprehensive overview of the main theories which structure debate about urban politics. It looks at aspects of power taking in both traditional and more recent theories. It considers the nature of public bureaucracy and the importance of those officials with a leadership role in city government. It examines the way that citizens are involved in the processes of urban politics and it puts urban politics in context in terms of the social and economic environment and the complex architecture of government in which it has to operate.

Urban Governance Voice and **Poverty in the Developing World** Nick Devas, 2012. Poverty and governance are both issues high on the agenda of international agencies and governments in the South. With urban areas accounting for a steadily growing share of the world's poor people, an international team of researchers focused their attention on the hitherto little studied relationship between urban governance and urban poverty. In their timely and in depth examination of ten cities in Africa, Asia and Latin America, they demonstrate that in many countries the global trends towards decentralization and democratization offer new opportunities for the poor to have an influence on the decisions that affect them. They also show how that influence depends on the nature of those democratic arrangements and decision making processes at the local level as well as on the ability of the poor to organize. The study involved interviews with key actors within and outside city governments, discussions with poverty groups, community organizations and non governmental organizations, NGOs as well as analyses of data on poverty services and finance. This book presents insights, conclusions and practical examples that are of relevance for other cities. It outlines policy implications for national and local governments, NGOs and donor agencies and highlights ways in which poor people can use their voice to influence the various institutions of city governance.

Urban Politics in India Rodney W. Jones, 1974. Revised thesis on urban politics in the central Indian urban area of Indore shows how the components of local government and political leadership respond to demands and manage conflict despite ethnic group rivalries and centralization of political power at the state level. The Politics of Urban Development Clarence Nathan Stone, Heywood T. Sanders, 1987. In the past twenty years the study of urban politics has shifted from a predominant concern with political culture and ethos to a preoccupation with political economy, particularly that of urban development. Urban scholars have come to recognize that cities are shaped by forces beyond their boundaries. From that focus have emerged the views that cities are clearly engaged in economic competition that market processes are shaped by national policy decisions, sometimes intentionally and sometimes inadvertently, and that the costs and benefits of economic growth are unevenly distributed. But what else needs to be said about the policies and politics of urban development? To supplement prevailing theories, *The Politics of Urban Development* argues that the role of local actors in making development decisions merits closer study. Whatever the structural constraints, politics still matters. Collectively, the essays provide ample evidence that local government officials and other community actors do not simply follow the imperatives that derive from the national political economy; they are able to assert a significant degree of influence.

over the shared destiny of an urban population The impact of the collection is to heighten awareness of local political practices and of how and why they make a difference

The Role of the State in China's Urban System Development Jiejing Wang, 2021-02-13 This book investigates how the state intervenes in the urban system in China in the post reform period To do so it constructs a conceptual framework based on the perspective of political hierarchy suggesting that the state power is hierarchically organized in China s urban system leading to variations in urban government capacities among cities The book reveals that the state has largely achieved the goal of its national urban system policy to strictly control the scale of large cities resulting in the under development of the large cities if they are mainly developing according to the market force However this has become less influential with the advances toward a market economy Further state regulation and policies have reduced the gaps between cities at the top and bottom of the urban hierarchy The book argues that the Urban Administrative System UAS is an important tool for the state to regulate urban system development and the administrative level has a significant effect on urban growth performance It contends that China s urban system is strongly shaped by the omnipresent state through the UAS which hierarchically differentiates between the urban growth processes By controlling the administrative level upgrading process the state can prevent the size and number of cities from increasing too rapidly This theoretical and empirical enquiry highlights the fact that the hierarchical power relations among cities and the resulting variations in urban government capacities are the key to understanding the role of the state in China s urban system development in the post reform period
