The Visualization of Climate Joe R. Eagleman,1976      Exploring the Role of Visualization in Climate Change Communication - an Audience Perspective Anne Gammelgaard Ballantyne,2018-05-08

Climate change communication is a topical and relevant issue and it is widely acknowledged that public communication about causes impacts and action alternatives is integral to addressing the challenges of the changing climate Climate visualization concerns the communication of climate information and data through the use of different information technologies and different modes of visual representation In the context of climate change communication climate visualization is highlighted as a potential way of increasing public engagement with climate change In particular developments within information technology have provided significant advancements that are claimed to be transformative in engaging lay audiences with issues relating to the mitigation of and adaptation to climate change Nevertheless there is a lack of research exploring climate visualization from an audience perspective This thesis addresses this gap The overarching aim is thus to explore the role of climate visualization in climate change communication from an audience perspective focusing specifically on how lay audiences make meaning of climate change as represented in two examples of climate visualization In addition the thesis discusses the potential contributions and or limitations of climate visualization from a communication perspective Based on a social semiotic theoretical framework this thesis employs focus group interviews to study participants meaning making related to two cases of climate visualization a dome theatre movie developed for Swedish high school students with the aim of encouraging reflection on climate change causes impacts and mitigation alternatives and a web based tool for climate change adaptation developed to assist Nordic homeowners in adapting to the local impacts of climate change The results of this thesis show that climate visualization can help audiences concretize otherwise abstract aspects of climate change and that the localized focus can make climate change appear more personally relevant and interesting for targeted audiences Nevertheless despite these communicative qualities the analyses also show that participants interpretations are shaped by their preconceptions of climate change as a global and distant issue to be solved by other actors such as national governments or through international policy negotiations Although climate visualization can enhance a sense of proximity with climate change the localization of climate risk can also lead to participants downplaying the significance of climate impacts In addition despite the intentions of inducing a sense of agency in both cases of climate visualization participants critically negotiated messages concerning their roles as individuals in mitigating or adapting to climate change and assigned this responsibility onto other actors These findings show that although climate visualization presents certain communicative qualities it is not a panacea for engaging lay audiences with climate change This also underlines the importance of considering cultural and social aspects of the communicative event when studying and developing climate visualization tools as a means of communication

**Visualizing Climate Change** Stephen R.J. Sheppard, 2012-03-29 Carbon dioxide and global climate change are largely invisible and the prevailing imagery of climate change is often remote such as ice floes melting or abstract and scientific charts and global temperature maps Using dramatic visual imagery such as 3D and 4D visualizations of future landscapes community mapping and iconic photographs this book demonstrates new ways to make carbon and climate change visible where we care the most in our own backyards and local communities Extensive color imagery explains how climate change works where we live and reveals how we often conceal misinterpret or overlook the evidence of climate

change impacts and our carbon usage that causes them This guide to using visual media in communicating climate change vividly brings to life both the science and the practical solutions for climate change such as local renewable energy and flood protection It introduces powerful new visual tools from outdoor signs to video games for communities action groups planners and other experts to use in engaging the public building awareness and accelerating action on the world s greatest crisis

**Interactive Visualization of Climate Change** Sam

Lumley,2021 Interactive visualization is becoming a widely used method for delivering information about climate change In this thesis I introduce the term climate visualization tools CVTs to refer to the interactive visualization of climate change data in web based interfaces such as climate data portals decision support tools data journalism articles and educational climate models Researchers and practitioners have argued that CVTs can play a critical role in making climate change data more understandable actionable and meaningful to non scientists Yet there remain open questions around how effectively CVTs deliver on their intended goals in real use scenarios To meet this gap this thesis critically examines the characteristics of existing CVTs the intentions of their creators and the methods used to evaluate their success I begin by reviewing the literature on climate change visualization tracing how interactive visualization methods have evolved to serve a rapidly expanding range of use cases Past research on the effectiveness of CVTs in real world scenarios has largely been restricted to individual case studies Yet critical research suggests that there remain gaps between the expectations of designers and practical outcomes I argue that it is therefore important to examine existing CVTs to determine whether increasing investments are well founded in supporting urgent climate change goals Chapter 3 presents a content analysis of 41 existing CVTs I analyze their objectives data content visualization techniques interactivity functionality and technology architecture The analysis reveals strong trends across CVTs including a focus on meteorological impacts e g temperature changes the prevalence of maps to represent data an emphasis on media sharing options and the use of interactivity primarily to toggle variables and reveal supplementary information This study also provides an annotated dataset of existing CVTs available at [https://github.com/smlum/climate\\_vis](https://github.com/smlum/climate_vis) which can serve future research and development by revealing commonly used techniques Chapter 4 presents the results of a semi structured interview study with 22 lead designers of CVTs from government research non profit and news media I investigate designers backgrounds expectations conception of success evaluation methods and commonly faced challenges The results reveal a high level of interdisciplinarity involved in CVT development often requiring expertise across climate science and web development as well as psychology design marketing management and community engagement Designers emphasized several challenges including measuring success directly disseminating CVTs developing long lasting impacts and the simplifying complex climate change information Chapter 5 concludes with implications for future research This thesis makes several contributions to climate change visualization research First the findings reveal techniques intentions and success metrics used in state of the art practice Second it

introduces an empirically derived typology for the analysis of CVTs to capture their interactive capabilities Third the findings suggest several gaps between research and practice in CVT development In particular practical measures of success and post development tasks receive comparatively little attention in the visualization literature despite their reported importance Ultimately I argue that better integrating interdisciplinary knowledge across research and practice will be critical in meeting the rising demand for climate change information among non scientists

**Visualizing Weather and Climate** Bruce Anderson, Alan H. Strahler, 2012-04-13 Visualizing Weather and Climate offers students a valuable opportunity to identify and connect the central issues of weather climate and the atmosphere through a visual approach The text is organized around the premise that weather and climate are two interrelated and equally important influences upon environmental processes and human activity As students explore the critical topics of weather and climate their study of the role of the atmosphere is interwoven with the behavior of the oceans land surfaces ecosystems and human activity Visualizing Weather and Climate integrates visuals with text to elucidate concepts for students and solidify their understanding of them The accessible format allows students to navigate through the material with greater ease

**Interactive Correlation**

**Analysis and Visualization of Climate Data**, 2016 The relationship between our ability to analyze and extract insights from visualization of climate model output and the capability of the available resources to make those visualizations has reached a crisis point The large volume of data currently produced by climate models is overwhelming the current decades old visualization workflow The traditional methods for visualizing climate output also have not kept pace with changes in the types of grids used the number of variables involved and the number of different simulations performed with a climate model or the feature richness of high resolution simulations This project has developed new and faster methods for visualization in order to get the most knowledge out of the new generation of high resolution climate models While traditional climate images will continue to be useful there is need for new approaches to visualization and analysis of climate data if we are to gain all the insights available in ultra large data sets produced by high resolution model output and ensemble integrations of climate models such as those produced for the Coupled Model Intercomparison Project Towards that end we have developed new visualization techniques for performing correlation analysis We have also introduced highly scalable parallel rendering methods for visualizing large scale 3D data This project was done jointly with climate scientists and visualization researchers at Argonne National Laboratory and NCAR
