Architectures for Quality of Service in the Internet Wojciech Burakowski, Berthold Koch, Andrzej Bęben, 2003-06-23 Providing Quality of Service QoS in the Internet is currently the most challenging topic for researchers industry and network providers Now the only available service in the Internet is the best effort service which assumes traffic is processed as quickly as possible but there is no guarantee as to timely or actual delivery On the other hand there is pressure to offer new applications in the Internet like VoIP videoconferencing online games e-commerce etc but this requires some packet transfer guarantees from the network e.g. low packet transfer delay low packet losses To meet these requirements new architectures for providing IP based QoS in the Internet are proposed Integrated Services IntServ and Differentiated Services DiffServ However these architectures need some enhancements to provide adequate solutions for resource management signaling traffic engineering traffic handling mechanisms etc In the European research community a number of projects inside the Fifth Framework Programme were addressed solving the above issues among these AQUILA Adaptive Resource Control for QoS Using an IP Based Layered Architecture CADENUS Creation and Deployment of End User Services in Premium IP Networks and TEQUILA Traffic Engineering for Quality of Service in the Internet at Large Scale are excellent examples The main achievements from these projects are the prototypes for fixed QoS IP
