Stranger Alone:

What Determines Social Behavior? Investigating the Role of Emotions, Self-Centered Motives, and Social Norms Corrado Corradi-Dell'Acqua, Leonie Koban, Susanne Leiberg, Patrik Vuilleumier, Ernst Fehr, 2016-09-28 Human behavior and decision making is subject to social and motivational influences such as emotions norms and self other regarding preferences The identification of the neural and psychological mechanisms underlying these factors is a central issue in psychology behavioral economics and social neuroscience with important clinical social and even political implications However despite a continuously growing interest from the scientific community the processes underlying these factors as well as their ontogenetic and phylogenetic development have so far remained elusive In this Research Topic we collect articles that provide challenging insights and stimulate a fruitful controversy on the question of what determines social behavior Indeed over the last decades research has shown that introducing a social context to otherwise abstract tasks has diverse effects on social behavior On the one hand it may induce individuals to act irrationally for instance to refuse money but on the other hand it improves individuals reasoning in that formerly difficult abstract problems can be easily solved These lines of research led to distinct although not necessarily mutually exclusive models for socially driven behavioral changes For instance a popular theoretical framework interprets human behavior as a result of a conflict between cognition and emotion with the cognitive system promoting self interested choices and the emotional system triggered by the social context operating against them Other theories favor social norms and deontic heuristics in biasing human reasoning and encouraging choices that are sometimes in conflict with one s interest Few studies attempted to disentangle between these as well as other models As a consequence although insightful results arise from specific domains tasks a comprehensive theoretical framework is still missing Furthermore studies employing neuroimaging techniques have begun to shed some light on the neural substrates involved in social behavior implicating consistently although not exclusively portions of the limbic system the insular and the prefrontal cortex In this context a challenge for present research lies not only in further mapping the brain structures implicated in social behavior or in describing in detail the functional interaction between these structures but in showing how the implicated networks relate to different theoretical models This is Research Topic hosted by members of the Swiss National Center of Competence in Research Affective Sciences Emotions in Individual Behaviour and Social Processes We collected contributions from the international community which extended the current knowledge about the psychological and neural structures underlying social behavior and decision making In particular we encouraged submissions from investigators arising from different domains psychology behavioral economics affective sciences etc implementing different techniques behavior electrophysiology neuroimaging brain stimulations on different populations neurotypical adults children brain damaged or psychiatric patients etc Animal studies are also included as the data reported are of high comparative value Finally we also welcomed submissions of meta analytical articles mini reviews and perspective papers

which offer provocative and insightful interpretations of the recent literature in the field *How to Survive Your Childhood Now That You're an Adult* Ira Israel, 2017-10-10 As children we learned to get approval by creating facades to help us get our emotional and psychological needs met but we also rebelled against authority as a way of individuating As adults these conflicting desires leave many of us feeling anxious or depressed because our authentic selves are buried deep beneath glitzy or rebellious exteriors or some combination thereof In this provocative book eclectic teacher and therapist Ira Israel offers a powerful comprehensive step by step path to recognizing the ways of being that we created as children and transcending them with compassion and acceptance By doing so we discover our true callings and cultivate the authentic love we were born deserving *Emotion , Father and Child* Stanley H. Cath, Alan R. Gurwitt, John M. Ross, 2013-11-26 First published in 1982 A decade ago the psychological literature contained few pieces on fathers and fathering The father was the forgotten parent Since then the focus on fatherhood has intensified with a proliferation of research studies on the subject This newfound interest in a man's importance to his children can be attributed to a variety of recent far reaching developments This study is presented under the belief that the rich data available through psychoanalysis may provide a unique window on the evolution and vicissitudes throughout life of fatherhood and fathering from the perspectives of both parent and child **The Harvard Classics** Charles William Eliot, 1909 **A Shepherd's Life** William Henry Hudson, 1920 *Commentaries on the Law of Trusts and Trustees* Charles Fisk Beach, 1897 *Eugénie Grandet* Honoré de Balzac, 1895 *Tinsley's Magazine* , 1873 *Belgravia, a London magazine, conducted by M.E.
