metaversal technologies are directly geared towards the body in that they not only seek to extend or expand our embodied senses and emplace our bodies in virtual spaces but they also seek to capture their behaviours and actions on a far more granular level This can create new opportunities in terms of work social interaction and leisure but can also open our bodies up to new tech driven interventions and control Whether in the form of VR or AR such technologies not only reproduce space but also rely on making spaces more legible and open to automated interventions Taken together the metaversification of spaces and bodies gives rise to crucial questions about the goals and implications of metaversal developments by large technology companies and about the relationship between the developments of the metaverse and AI systems Drawing on our combined background and expertise in Science and Technology Studies and the History of Media and Communication we critically analyse the development of metaversal technologies and platforms by discussing a broad set of developments and examples from a wide range of technology and gaming companies Written in clear concise and accessible language and combining and applying novel theoretical frameworks and concepts to a currently emergent phenomenon this book will find a large audience not only within academic and professional circles but also in popular culture
