## **Understanding Coldwater Fish:**

Aquaculture and Conservation of Inland Coldwater Fishes Debajit Sarma, Suresh Chandra, Sumanta Kumar

Mallik, 2024-05-30 This book provides the latest information on trans Himalayan Hindu Kush Region HKR fisheries including the Indian Himalayan Region IHR as well as the historical context of its sustainable development for improving livelihood and nutritional security. The book serves as an important document to provide knowledge and information about the major concerns of environmental and anthropogenic factors that have impacted the population of certain important fishes in the ecosystem and the strategies and policies required for the conservation of these important groups of fishes viz Mahseer, snow trout, minor carp, catfishes etc. The chapters describe the information to the readers on potential cold water and cool water fish species suitable for large scale farming and propagation, addressing the issues of diseases, nutrigenomics and nanobiotechnology. This book also addresses the prospects and potential of recreational fishing in India and the scope for its improvement to generate more employment and income, citing the success stories and primary information from reputed anglers. Finally, the book also elucidates a comprehensive yet representative description of many challenges associated with inland coldwater cool water fisheries and aquaculture in HKR IHR and its way forward. *Understanding Coldwater Fish*

**Handbook of Climate Change Mitigation and Adaptation** Maximilian Lackner, Baharak

Sajjadi, Wei-Yin Chen, 2025-09-26 Now in its 4th extended edition, this completely revised and significantly expanded handbook addresses important new research findings and the global need for action related to climate change in its two most relevant aspects: mitigation and adaptation. There is a growing consensus that anthropogenic activities have been driving global climate change and the consequence will be catastrophic for civilization. Reducing the 37.1 billion metric tons of CO<sub>2</sub> produced annually in 2017, along with other greenhouse gases, particularly methane, has become a leading grand challenge and the pursuit of sustainable energy environments and economies is a complex issue affecting the daily life of every citizen. In this 4th edition, readers will find new chapters covering the causes and impacts of global warming, the climate change impacts on health, biodiversity, and the economy, and emerging technologies for climate change mitigation. Particular attention is given to topics such as wildfire threats, ocean acidification, coral bleaching, sea level rise, and permafrost thaw. The latest research on sustainable aviation fuels, carbon mineralization, and smart cities is also covered in this new edition, as well as topics like sustainable building design, climate resistant building materials, and sustainable agriculture. The Handbook of Climate Change Mitigation and Adaptation collates information in this multi-disciplinary area, providing readers with a comprehensive overview of the scientific background and current and emerging technologies. Intended for an interdisciplinary global audience of researchers and decision makers at universities and in industry, it covers climate change models, established mature and promising future technologies, and ideas, the impact of climate change, strategies for dealing with global warming, the related political frameworks, and climate education. **A Social &**
