**Managing Urban River Ecosystems for Achieving Regional Sustainability in the Pearl River Delta Region** Hui Liu, 2024-12-13 This book provides a systematic understanding of urban river management from the perspective of ecosystem health in the Pearl River Delta region of China where rapid socio economic development happens together with exploitation and pollution of the natural environment Urban rivers which used to support navigation and provide water resources to humans now suffer from various kinds of ecosystem degradation and thus create threats to regional sustainability This book treats the urban river as an ecosystem which closely relates to and interacts with humans and defines urban river ecosystem health as a requirement at three levels sensorial fitness living water and affinity with humans which emphasizes more on the human oriented needs The evolution processes of urban river ecosystem health protection can generally be divided into four phases demonstrating the relationships between human activities and UREH status as simple balance uncontrolled imbalance continuous interlocking and stable harmony The relationships between typical urban rivers and humans in the Pearl River Delta region China are then analyzed on both regional and local scales and from lateral time longitudinal and spatial dimensions Intensive human activities together with the intrinsic complex and high density river network result in deteriorating water quality changing hydrological conditions and damaging the river ecosystem in this region From the perspective of political ecology various actors in urban river management include governmental agencies business multilateral institutions NGOs and grassroots actors whose unequal power relations vary over time and space causing conflicts as well as coordination Especially different governmental agencies are engaged resulting into overlap and gap among their functions as well as spatial discrepancy River Chief System as a new practice of urban river management has strengthened the collaboration effect and got success in river pollution control The spatial scale effect of human activities on

urban river water quality is examined implying the necessity of adopting a unified management strategy at the buffer zone scale to protect and restore urban river ecosystem health The target audience of this book includes postgraduate students and researchers who have research interests in as well as government officers whose routine is related to water management

**Rivertown** Paul Stanton Kibel,2007 Each case study in Rivertown considers the critical questions of who makes decisions about our urban rivers who pays to implement these decisions and who ultimately benefits or suffers from these decisions book cover

**Urban Rivers** Stephane Castonguay,Matthew Evenden,2012-05-10 Urban Rivers examines urban interventions on rivers through politics economics sanitation systems technology and societies how rivers affected urbanization spatially in infrastructure territorial disputes and in flood plains and via their changing ecologies Providing case studies from Vienna to Manitoba the chapters assemble geographers and historians in a comparative survey of how cities and rivers interact from the seventeenth century to the present Rising cities and industries were great agents of social and ecological changes particularly during the nineteenth century when mass populations and their effluents were introduced to river environments Accumulated pollution and disease mandated the transfer of wastes away from population centers In many cases potable water for cities now had to be drawn from distant sites These developments required significant infrastructural improvements creating social conflicts over land jurisdiction and affecting the lives and livelihood of nonurban populations The effective reach of cities extended and urban space was remade By the mid twentieth century new technologies and specialists emerged to combat the effects of industrialization Gradually the health of urban rivers improved From protoindustrial fisheries mills and transportation networks through industrial hydroelectric plants and sewage systems to postindustrial reclamation and recreational use Urban Rivers documents how Western societies dealt with the needs of mass populations while maintaining the viability of their natural resources The lessons drawn from this study will be particularly relevant to today s emerging urban economies situated along rivers and waterways *Urban Rivers* G. Petts,J. Heathcote,D. Martin,2002-03-31 The history of urban development is associated with the degradation of rivers the deterioration of water quality increased flooding and the loss of ecological resources The story of urban streams and rivers is as much a social history as it is a technological one The control of nature and exploitation of natural resources was at the heart of the industrialisation process and of advances in the co ordination and effective administration of water and land management schemes Today new approaches to the management of urban water are a response to advances in scientific knowledge and technology and of a new concern for quality of life Environmental improvement and ecological restoration demonstrate confidence in an area which can enhance economic competitiveness Along with improvements in air quality building stock and transport networks the restoration of stream and river corridors can make a major contribution to the success of urban regeneration schemes Urban Rivers provides an illustrated overview of the effects of urbanisation on the aquatic environment potential solutions to the resulting problems and new opportunities for the regeneration of urban

streams and rivers and of land along their corridors and of adjacent urban areas The book is written to be accessible to a broad audience and should provide a stimulating and informative introduction to the subject for all those concerned with the urban river environment *Rivers Lost, Rivers Regained* Martin Knoll,Uwe Lubken,Dieter Schott,2017-06-13 Many cities across the globe are rediscovering their rivers After decades or even centuries of environmental decline and cultural neglect waterfronts have been vamped up and become focal points of urban life again hidden and covered streams have been daylighted while restoration projects have returned urban rivers in many places to a supposedly more natural state This volume traces the complex and winding history of how cities have appropriated lost and regained their rivers But rather than telling a linear story of progress the chapters of this book highlight the ambivalence of these developments The four sections in *Rivers Lost Rivers Regained* discuss how cities have gained control and exerted power over rivers and waterways far upstream and downstream how rivers and floodplains in cityscapes have been transformed by urbanization and industrialization how urban rivers have been represented in cultural manifestations such as novels and songs and how more recent strategies work to redefine and recreate the place of the river within the urban setting At the nexus between environmental urban and water histories *Rivers Lost Rivers Regained* points out how the urban river relationship can serve as a prime vantage point to analyze fundamental issues of modern environmental attitudes and practices **Rehabilitation of Rivers** Louise de Waal,Louise C. De Waal,Andrew R. G. Large,P. Max Wade,1998 *Rehabilitation of Rivers Principles and Implementation* Edited by Louise C de Waal Division of Environmental and Analytical Sciences University of Wolverhampton UK Andrew R G Large Department of Geography University of Newcastle UK and P Max Wade Department of Environmental Sciences University of Hertfordshire UK River rehabilitation has become an issue at the top of the agenda for water authorities and river managers in many countries throughout the world This challenging topic involves a wide range of themes many of which are brought together in this volume They concern planning strategy implementation and project appraisal for a number of different types of river systems including upland lowland and urban rivers Topic areas addressed include hydrology geomorphology ecology and economics as to be successful rehabilitation of freshwaters must incorporate all of these subjects within a holistic framework This volume covers a wide range of countries provides comprehensive and integrated coverage of factors concerning river rehabilitation and encompasses policy planning and implementation As such the text will have a lasting reference value and practical application *Rehabilitation of Rivers* combines prescriptive analytical and reviewing contributions covering a wide range of case studies from Britain continental Europe the USA Australia and Japan It also examines strategic issues such as catchment planning and integrated application of ecology and engineering in river rehabilitation This book will be an important text for all water authorities and river managers as well as hydrologists geomorphologists ecologists and nature conservationists *Readings in Urban Sociology* Scott Elias William Bedford,1927 *Urban Residence in the Union of South Africa* South African Railways and Harbours,1929 *Report of Water Resources*
