Pressure-Sensitive Formulation Istvan Benedek, 2020-06-07 Growing interest in the formulation of pressure sensitive adhesives as described in the first edition of this book Pressure Sensitive Formulation VSP 2000 required a new enlarged edition including the design of pressure sensitive adhesives as a separate volume Developments in the understanding of

pressure sensitivity were necessary to use macromolecular chemistry for pressure sensitive design. Such developments include polymer physics and contact mechanics. Progress in coating technology especially in in line coating and synthesis opened new ways for the design of pressure sensitive adhesives and products as well. Actually pressure sensitive products with and without adhesives compete requiring a broad variety of material formulations and the corresponding manufacturing technology. The first volume of the book examines the theoretical aspects of pressure sensitive design based on macromolecular chemistry, macromolecular physics, rheology and contact mechanics. The second volume describes the practical aspects of pressure sensitive design and formulation related to product application. The advances in the various domains are described by specialists.

Modern Portfolio Optimization with NuOPTM, S-PLUS®, and S+Bayes™
Bernd Scherer, R. Douglas Martin, 2007-09-05

In recent years portfolio optimization and construction methodologies have become an increasingly critical ingredient of asset and fund management while at the same time portfolio risk assessment has become an essential ingredient in risk management and this trend will only accelerate in the coming years. Unfortunately there is a large gap between the limited treatment of portfolio construction methods that are presented in most university courses with relatively little hands on experience and limited computing tools and the rich and varied aspects of portfolio construction that are used in practice in the finance industry. Current practice demands the use of modern methods of portfolio construction that go well beyond the classical Markowitz mean variance optimality theory and require the use of powerful scalable numerical optimization methods. This book fills the gap between current university instruction and current industry practice by providing a comprehensive computationally oriented treatment of modern portfolio optimization and construction methods. The computational aspect of the book is based on extensive use of S Plus the S NuOPTM optimization module the S Plus Robust Library and the S Bayes™ Library along with about 100 S Plus scripts and some CRSP sample data sets of stock returns. A special time limited version of the S Plus software is available to purchasers of this book. For money managers and investment professionals in the field optimization is truly a can of worms rather left unopened until now. Here lies a thorough explanation of almost all possibilities one can think of for portfolio optimization complete with error estimation techniques and explanation of when non normality plays a part. A highly recommended and practical handbook for the consummate professional and student alike.

Steven P Greiner Ph D Chief Large Cap Quant Fundamental Research Manager Harris Investment Management. The authors take a huge step in the long struggle to establish applied post modern portfolio theory. The optimization and statistical techniques generalize the normal linear model to include robustness non normality and semi conjugate Bayesian analysis via MCMC. The techniques are very clearly demonstrated by the extensive use and tight integration of S Plus software. Their book should be an enormous help to students and practitioners trying to move beyond traditional modern portfolio theory.

Peter Knez CIO Global Head of Fixed Income Barclays Global Investors. With regard to static portfolio optimization the book gives a good survey on the development from the basic Markowitz approach.
