

The Concept of Affect Logic: An Integrative Psycho-Socio-Biological Approach to Understanding and Treatment of Schizophrenia

Luc Ciompi

IN THIS ARTICLE, the psycho-socio-biologically integrative concept of affect-logic, and its relevance for a comprehensive understanding and therapy of schizophrenia, is briefly presented. This concept has been developed by the author over the past 20 years, on the basis of the literature, of clinical experience and his own research into long-term evolution, rehabilitation, effects of milieu-therapy, and nonlinear evolutionary dynamics of the illness. It postulates, basically, that fundamental affective states (or emotions, feelings, moods) are continuously and inseparably linked to all cognitive functioning (or "thinking" and "logic" in a broad sense), and that affects have essential organizing and integrating effects on cognition. Schizophrenia is understood as an altered mode of affective-cognitive interaction based, possibly, on disturbed (loosened) affective-cognitive connections. This hypothesis leads to: 1) an integrative psycho-socio-biological model of long-term evolution of the illness; 2) a new understanding of psychopathological core phenomena such as ambivalence, incoherence, and emotional flattening; 3) an innovative therapeutic approach based on an emotion-relaxing milieu and style of care; and 4) the hypothesis that schizophrenia could basically be an affective (and not a cognitive) disease, of another kind than mania or melancholia, however.

Since the classical descriptions by Kraepelin (1896) and Bleuler (1911) of the psychotic condition we now call schizophrenia, this enigmatic disorder continues to represent one of the most puzzling unsolved problems in the whole field of medicine. Even though many biological, social, and psychological factors which influence its etiology and course have been detected during the last decades — among

them genetic, perinatal, and biochemical factors, disturbed rearing conditions and confusing familial communication patterns, high expressed emotions, socio-economic and cultural conditions (references see below) — no predominant single "cause" of the multitude of psychotic phenomena has so far been identified, nor has an adequate theoretical framework emerged which would convincingly link

Luc Ciompi, MD, is Professor of Psychiatry and former Director of the Social-Psychiatric University Clinic of Bern, Switzerland. He has won several international scientific awards, among them the Stanley R. Dean Award of the American College of Psychiatry, 1986. Address correspondence to Luc Ciompi, M.D., Prof. Em. of Psychiatry, Cita 6, La Cour, CH-1092 Belmont-sur Lausanne, Switzerland.

This paper is based on a lecture at the XIth International Symposium for the Psychotherapy of Schizophrenia, Washington DC, June 12–16, 1994.
