The Technology Pork Barrell:

The Technology Pork Barrell Linda R. Cohen, Roger G. Noll, 1991 American public policy has had a long history of technological optimism The success of the United States in research and development contributes to this optimism and leads many to assume that there is a technological fix for significant national problems Since World War II the federal government has been the major supporter of commercial research and development efforts in a wide variety of industries But how successful are these projects And equally important how do economic and policy factors influence performance and are these influences predictable and controllable Linda Cohen Roger Noll and three other economists address these questions while focusing on the importance of R D to the national economy They examine the codependency between technological progress and economic growth and explain such matters as why the private sector often fails to fund commercially applicable research adequately and why the government should focus support on some industries and not others They also analyze political incentives facing officials who enact and implement programs and the subsequent forces affecting decisions to continue terminate or redirect them The central part of this book presents detailed case histories of six programs the supersonic transport communications satellites the space shuttle the breeder reactor photovoltaics and synthetic fuels The authors conclude with recommendations for program restructuring to minimize the conflict between economic objectives and political constraints *The Valley of Death, the Technology Pork Barrel, and Public Support for Large Demonstration Projects* Gregory F. Nemet, Martina Kraus, Vera Zipperer, 2016 Technology Policy: Surface transportation infrastructure R&D United States. Congress. House. Committee on Science, Space, and Technology. Subcommittee on Technology, Environment, and Aviation, 1993 **A Republic No More** Jay Cost, 2016-07-12 After the Constitutional Convention Benjamin Franklin was asked Well Doctor what have we got a Republic or a Monarchy Franklin s response A Republic if you can keep it This book argues we couldn t keep it A true republic privileges the common interest above the special interests To do this our Constitution established an elaborate system of checks and balances that disperses power among the branches of government which it places in conflict with one another The Framers believed that this would keep grasping covetous factions from acquiring enough power to dominate government Instead only the people would rule Proper institutional design is essential to this system Each branch must manage responsibly the powers it is granted as well as rebuke the other branches when they go astray This is where subsequent generations have run into trouble we have overloaded our government with more power than it can handle The Constitution s checks and balances have broken down because the institutions created in 1787 cannot exercise responsibly the powers of our sprawling immense twenty first century government The result is the triumph of special interests over the common interest James Madison called this factionalism We know it as political corruption Corruption today is so widespread that our government is not really a republic but rather a special interest democracy Everybody may participate yes but the contours of public policy depend not so much on the

common good as on the push and pull of the various interest groups encamped in Washington DC **Technology Policy**
