Utilizing Problem Structure In Planning A Local Search Approach:

Utilizing Problem Structure in Planning Jrg Hoffmann,2003-10-10 Planning is a crucial skill for any autonomous agent be it a physically embedded agent such as a robot or a purely simulated software agent For this reason planning as a central research area of artificial intelligence from its beginnings has gained even more attention and importance recently After giving a general introduction to AI planning the book describes and carefully evaluates the algorithmic techniques used in fast forward planning systems FF demonstrating their excellent performance in many wellknown benchmark domains In advance an original and detailed investigation identifies the main patterns of structure which cause the performance of FF categorizing planning domains in a taxonomy of different classes with respect to their aptitude for being solved by heuristic approaches such as FF As shown the majority of the planning benchmark domains lie in classes which are easy to solve

KI 2011: Advances in Artificial Intelligence Joscha Bach,Stefan Edelkamp,2011-10-01 This book constitutes the refereed proceedings of the 34th Annual German Conference on Artificial Intelligence KI 2011 held in Berlin Germany in October 2011 The 32 revised full papers presented together with 3 invited talks were carefully reviewed and selected from 81 submissions The papers are divided in topical sections on computational learning and datamining knowledge representation and reasonings augmented reality swarm intelligence and planning and scheduling Multi-Robot Task Allocation for Inspection Problems with Cooperative Tasks Using Hybrid Genetic Algorithms Liu, Chun,2014 In this dissertation methods for optimal multi robot task allocation MRTA for industrial plant inspection are investigated MRTA involves distributing and scheduling a set of tasks for a group of robots to minimize the total cost taking into account operational constraints With technical progress and declining cost of robotic mobility interest in industrial mobile robotics has grown significantly in recent years Many efforts have been devoted to mobility related problems such as self localization and mapping though only few studies deal with the optimal task allocation in multi robot systems Since a good task allocation provides more efficient scheduling e g less cost shorter time the objective of this research is to develop search optimization methods for inspection problems that involve both single and two robot tasks **Handbook of Approximation Algorithms and Metaheuristics** Teofilo F. Gonzalez,2007-05-15 Delineating the tremendous growth in this area the Handbook of Approximation Algorithms and Metaheuristics covers fundamental theoretical topics as well as advanced practical applications It is the first book to comprehensively study both approximation algorithms and metaheuristics Starting with basic approaches the handbook presents the methodologies to design and analyze efficient approximation algorithms for a large class of problems and to establish inapproximability results for another class of problems It also discusses local search neural networks and metaheuristics as well as multiobjective problems sensitivity analysis and stability After laying this foundation the book applies the methodologies to classical problems in combinatorial optimization computational geometry and graph problems In addition it explores large scale and emerging applications in networks bioinformatics VLSI game

theory and data analysis Undoubtedly sparking further developments in the field this handbook provides the essential techniques to apply approximation algorithms and metaheuristics to a wide range of problems in computer science operations research computer engineering and economics Armed with this information researchers can design and analyze efficient algorithms to generate near optimal solutions for a wide range of computational intractable problems
