sustainable product design is required one that considers all aspects of a product's life cycle from design to production to use and then final disposal. This edited collection introduces a new set of methods and tools aligned with the concept of comprehensive sustainable product design that integrates the environmental and social benefits of a product in line with the principles of a circular economy. It provides a comprehensive understanding of the theoretical and practical framework that underpins a sustainable product, highlighting the multiple key roles of eco design, innovation, quality, and sustainability. The authors describe the criteria for which products can be defined as being sustainable and outline how different manufacturing technologies influence the value of those products and the place they can find on the market accordingly. The book's significant contribution lies in identifying the critical factors that are needed to successfully implement the framework throughout the entire life cycle of the product in a holistic, integrated approach. This book will be of interest for researchers and students studying sustainable product design, environmental studies, engineering, and sustainable business management. It will also be a useful resource for representatives of the business community, managers, technicians, decision makers, and consumers interested in sustainable product design issues.

**Hospitality and Tourism 2015** Salamiah A. Jamal, Salleh Mohd Radzi, Norzuwana Sumarjan, C.T. Chik, Mohd Faez Saiful Bakhtiar, 2015-10-29. *Innovation and Best Practices in Hospitality and Tourism Research* contains 71 accepted papers from the Hospitality and Tourism Conference HTC 2015 Melaka, Malaysia, 2-3 November 2015. The book presents the up and coming paradigms and innovative practices within the hospitality and tourism industries and covers the following topics: **Sustainable Public Procurement** Anastasia O'Rourke, 2013. With governments responsible for significant portions of national spending, the promise of including sustainability considerations into that spending can enable policy makers to lead by example with sustainable public procurement (SPP). The report examines the state of sustainable public procurement policies and practices being undertaken by national governments worldwide in the last five years. The research included a comprehensive literature and desktop review, 19 interviews, six country case studies, and a survey of 273 SPP experts worldwide. The objective was to create a baseline analysis that examines the evolving field of SPP and the drivers, barriers, needs, and opportunities in SPP.

*Principles of Green Design* Nicole Elise Esposito, 2013. A problem exists that many eco-friendly products on the market today are not widely accepted by consumers. Three pilot experiments were conducted to examine a few causes of poor eco-friendly product acceptance. The first two experiments involved the testing of alternative products to disposable plastic water bottles. Two hypotheses were developed: the attitude hypothesis and the user activity hypothesis. The attitude hypothesis states that a person with a positive environmental attitude will lead to better eco-friendly product recommendation and rating, greater product uses, and a greater chance of continued use. The user activity hypothesis states that a product with difficult set up or cleaning will lead to a worse product recommendation and rating, fewer product uses, and a smaller chance of continued use. Participants took home a product to test for one week and then returned to complete two surveys. a

demographics survey and a product evaluation survey These surveys measured variables such as environmental attitude product recommendation and rating number of uses continued use and many others The results of the experiments show a relation between environmental attitude and the participants future usage with the eco friendly product In addition the data shows that difficulty of product set up and cleaning relate to the users opinion of the product Since this methodology of testing has not been documented before the lessons learned from these pilot experiments will help to develop a framework for product testing with human subjects The third pilot experiment tests the design method of defaults which may be a powerful tool when designing eco friendly products The theory behind the default option is that people typically choose the default setting on a product regardless if it is the best option This theory was tested with the use of automatic paper towel dispensers The lengths of the paper towels that the machines dispensed were changed periodically and the paper towel usage was measured The results from this experiment indicate that users obey the rule of defaults unless their needs are not being met at an extreme level The electronic version of this dissertation is accessible from <http://hdl.handle.net/1969/1/148165>
