Unity Of Evolutionary Biology:

The unity of evolutionary biology : proceedings of the Fourth International Congress of Systematic and Evolutionary Biology, University of Maryland, College Park, USA, July 1990 Elizabeth Corning Dudley,1991 The Unity of Evolutionary Biology Elizabeth Dudley,1991 *Biology* Cecie Starr,2004 *The Unity of Evolutionary Biology* Elizabeth Corning Dudley,1991 *Unity and Disunity in Evolutionary Biology* Richard G. Delisle,Maurizio Esposito,David Ceccarelli,2024-09-02 It is not uncommon to see in major areas of research concerned with science that historical studies are accompanied by the rise of complementary or contradictory historiographies With time it seems scholars discover new approaches to study topics thus questioning old concepts traditions periodizations and historical labels Apparently this has not been the case in evolutionary thought In that area the main historiographic labels such as Darwinian Revolution Eclipse of Darwinism and Modern Synthesis have been in place and largely uncontested for about 50 years Such labels seem to work as irrefutable and often hidden premises of many historical reconstructions philosophical analyses and scientific conceptualizations This volume aims to move beyond this state of affair opening new thinking avenues by revisiting the traditional historiography and laying the groundwork for establishing a new historiography that considers the intertwined threads that compose evolutionary biology Notably evolutionary studies seem to have been marked by the tension between unification attempts and the proliferation of approaches methodologies and styles of thinking As the contributors to this volume illustrate research traditions branched off throughout the history of evolutionary thought before and after Charles Darwin The resulting complexity challenges traditional thinking categories throwing a somewhat different light on a more recent label like the Extended Evolutionary Synthesis More than 40 years after the now classic *The Evolutionary Synthesis Perspectives on the Unification of Biology* 1980 edited by Ernst Mayr and William Provine the contributors to this volume aim to reevaluate where evolutionary biology stands today **The Oxford Handbook of Evolution, Biology, and Society** Dr. Rosemary Hopcroft,2018-03-09 This book contains an overview of research on the interaction of biological and sociological processes Issues explored include the origins of social solidarity religious beliefs sex differences gender inequality human happiness social stratification and inequality identity status and other group processes race ethnicity and discrimination fertility and family processes crime and deviance cultural and social change *ICSEB IV*,1990 *4th International Congress of Systematic and Evolutionary Biology* ICSEB IV.,1990 **The Structure of Evolutionary Theory** Stephen Jay Gould,2002-03-21 The world's most revered and eloquent interpreter of evolutionary ideas offers here a work of explanatory force unprecedented in our time a landmark publication both for its historical sweep and for its scientific vision With characteristic attention to detail Stephen Jay Gould first describes the content and discusses the history and origins of the three core commitments of classical Darwinism that natural selection works on organisms not genes or species that it is almost exclusively the mechanism of adaptive evolutionary change and that these changes are incremental not drastic Next

he examines the three critiques that currently challenge this classic Darwinian edifice that selection operates on multiple levels from the gene to the group that evolution proceeds by a variety of mechanisms not just natural selection and that causes operating at broader scales including catastrophes have figured prominently in the course of evolution Then in a stunning tour de force that will likely stimulate discussion and debate for decades Gould proposes his own system for integrating these classical commitments and contemporary critiques into a new structure of evolutionary thought In 2001 the Library of Congress named Stephen Jay Gould one of America s eighty three Living Legends people who embody the quintessentially American ideal of individual creativity conviction dedication and exuberance Each of these qualities finds full expression in this peerless work the likes of which the scientific world has not seen and may not see again for well over a century

The American Naturalist ,1997 **Agents and Goals in Evolution** Samir Okasha,2018-06-04 Samir Okasha approaches evolutionary biology from a philosophical perspective in Agents and Goals in Evolution analysing a mode of thinking in biology called agential thinking He considers how the paradigm case involves treating an evolved organism as if it were an agent pursuing a goal such as survival or reproduction and seeing its phenotypic traits as strategies for achieving that goal or furthering its biological interests As agential thinking deliberately transposes a set of concepts goals interests strategies from rational human agents and to the biological world more generally Okasha s enquiry firstly looks at the justification for this is it mere anthropomorphism or does it play a genuine intellectual role in the science From this central question key points are considered such as how do we identify the goal that evolved organisms will behave as if they are trying to achieve Can agential thinking ever be applied to groups rather than to individual organisms And how does agential thinking relate to the controversies over fitness maximization in evolutionary biology In addition Okasha examines the relation between the adaptive and the rational by considering whether organisms can validly be treated as agent like Should we expect their evolved behaviour to correspond with that of rational agents as codified in the theory of rational choice If so does this mean that the fitness maximizing paradigm of the evolutionary biologist can be mapped directly to the utility maximizing paradigm of the rational choice theorist All of these important questions are engagingly raised and discussed at length

Biology* Vassiliki Betty Smocovitis,2020-11-10 Unifying Biology offers a historical reconstruction of one of the most important
yet elusive episodes in the history of modern science the evolutionary synthesis of the 1930s and 1940s For more than
seventy years after Darwin proposed his theory of evolution it was hotly debated by biological scientists It was not until the
1930s that opposing theories were finally refuted and a unified Darwinian evolutionary theory came to be widely accepted by
biologists Using methods gleaned from a variety of disciplines Vassiliki Betty Smocovitis argues that the evolutionary
synthesis was part of the larger process of unifying the biological sciences At the same time that scientists were working
toward a synthesis between Darwinian selection theory and modern genetics they were according to the author also working
together to establish an autonomous community of evolutionists Smocovitis suggests that the drive to unify the sciences of
evolution and biology was part of a global philosophical movement toward unifying knowledge In developing her argument
she pays close attention to the problems inherent in writing the history of evolutionary science by offering historiographical
reflections on the practice of history and the practice of science Drawing from some of the most exciting recent approaches
in science studies and cultural studies she argues that science is a culture complete with language rituals texts and practices
Unifying Biology offers not only its own new synthesis of the history of modern evolution but also a new way of doing history
