Conditionals Paradox and Probability brings together fifteen original essays by experts in philosophy and linguistics. These specially written chapters draw on themes from the work of Dorothy Edgington, the first woman to hold a chair in philosophy at the University of Oxford. The contributors to this volume focus on the key topics to which Edgington has made many important contributions, including conditionals, vagueness, the paradox of knowability, and probability. Their insights will be of interest to philosophers, linguists, and psychologists working in philosophical logic, natural language semantics, and reasoning.

Ethics, Politics, and Natural Law Melissa Moschella, 2025-03-01

A rigorous but accessible overview of the new natural law account of ethics and political philosophy. The foundational principles of ethics and politics are principles that guide us to respect and promote human flourishing. In *Ethics, Politics, and Natural Law*, Melissa Moschella provides an accessible explanation and development of the new natural law account of these principles while clarifying common misconceptions. As a commonsense ethical theory, natural law grounds ethics in the fundamental dimensions of human flourishing. Moschella lays out the basic principles of natural law, their relationship to the virtues, and their social and political implications. Highlighting the importance of communities for flourishing, Moschella explains how this should shape our understanding of justice and the common good and shows how natural law principles support limited government and civil liberties. She also considers the relationship between morality and God and how natural law relates to Christian revelation. This fresh and compelling account of new natural law is the go-to resource to understand this important and influential theory.

Knowledge, Thought, and the Case for Dualism Richard Fumerton, 2013-10-17

This book offers a new rehabilitation of the knowledge argument for dualism, demonstrating its interconnection with philosophy of mind.

*A Neomedieval Essay in Philosophical Theology* Ramon M. Lemos, 2001-01-01

This extended essay presents the meditations of an eminent scholar on medieval philosophical theology. Beginning with a discussion of faith and reason, Ramon M. Lemos argues that we can be practically justified in accepting certain religions even though we may not know that their central claims are true. Lemos moves on to his operational definition of God based on St. Anselm's concept of God as a being that which no greater can be conceived. From this ground, he considers various medieval arguments for the existence of God and refutes the ability of the major arguments to succeed in demonstrating God's existence. He concludes that it is impossible to demonstrate the existence of God philosophically. This provocative book addresses the fundamental issues in the philosophy of religion from a Christian perspective while maintaining the necessary intellectual distance between revealed theology and philosophy.
