## **Topics In Advanced Econometrics:**

**Topics in Advanced Econometrics** Phoebus J. Dhrymes, 2012-12-06 For sometime now I felt that the evolution of the literature of econometrics had mandated a higher level of mathematical proficiency This is particularly evident beyond the level of the general linear model GLM and the general linear structural econometric model GLSEM The problems one encounters in nonlinear econometrics are not easily amenable to treatment by the analytical methods one typically acquires when one learns about probability and inference through the use of density functions Even in standard traditional topics one is often compelled to resort to heuristics for example it is difficult to prove central limit theorems for nonidentically distributed or martingale sequences solely by the use of characteristic functions Yet such proofs are essential even in only moderately sophisticated classroom exposition Unfortunately relatively few students enter a graduate economics department ready to tackle probability theory in measure theoretic terms The present volume has grown out of the need to lay the foundation for such discussions The motivating forces were chiefly a the frustration one encounters in attempting to communicate certain concepts to students wholly in analytic terms and b the unwillingness of the typical student to sit through several courses in mathematics departments in order to acquire the requisite background

**Topics In Advanced Econometrics** Phoebus J. Dhrymes, 2012-12-06 This book is intended for second year graduate students and professionals who have an interest in linear and nonlinear simultaneous equations models It basically traces the evolution of econometrics beyond the general linear model GLM beginning with the general linear structural econometric model GLSEM and ending with the generalized method of moments GMM Thus it covers the identification problem Chapter 3 maximum likelihood ML methods Chapters 3 and 4 two and three stage least squares 2SLS 3SLS Chapters 1 and 2 the general nonlinear model GNLM Chapter 5 the general nonlinear simultaneous equations model GNLSEM the special case of GNLSEM with additive errors nonlinear two and three stage least squares NL2SLS NL3SLS the GMM for GNLSEIV and finally ends with a brief overview of causality and related issues Chapter 6 There is no discussion either of limited dependent variables or of unit root related topics It also contains a number of significant innovations In a departure from the custom of the literature identification and consistency for nonlinear models is handled through the Kullback information apparatus as well as the theory of minimum contrast MC estimators In fact nearly all estimation problems handled in this volume can be approached through the theory of MC estimators The power of this approach is demonstrated in Chapter 5 where the entire set of identification requirements for the GLSEM in an ML context is obtained almost effortlessly through the apparatus of Kullback information

Advanced Econometrics Edward Greenberg, Charles Edward Webster, 1991 *The Econometrics of Individual Risk* Christian Gourieroux, Joann Jasiak, 2015-07-28 The individual risks faced by banks insurers and marketers are less well understood than aggregate risks such as market price changes But the risks incurred or carried by individual people companies insurance policies or credit agreements can be just as devastating as macroevents such as share price fluctuations A comprehensive introduction *The Econometrics of Individual Risk* is the first book to provide a complete econometric methodology for quantifying and managing this underappreciated but important variety of risk The book presents a course in the econometric theory of individual risk illustrated by empirical examples And unlike other texts it is focused entirely on solving the actual individual risk problems businesses confront today Christian Gourieroux and Joann Jasiak emphasize the microeconomic aspect of risk analysis by extensively discussing practical problems such as retail credit scoring credit card transaction dynamics and profit maximization in promotional mailing They address regulatory issues in sections on computing the minimum capital reserve for coverage of potential losses and on the credit risk measure CreditVar The book will interest graduate students in economics business finance and actuarial studies as well as actuaries and financial analysts
