Adaptive Decision Tree Algorithms for Learning from Examples Giulia M. Pagallo, 1990 Data Mining, Southeast Asia Edition Jiawei Han, Jian Pei, Micheline Kamber, 2006-04-06 Our ability to generate and collect data has been increasing rapidly Not only are all of our business scientific and government transactions now computerized but the widespread use of digital cameras publication tools and bar codes also generate data On the collection side scanned text and image platforms satellite remote sensing systems and the World Wide Web have flooded us with a tremendous amount of data This explosive growth has generated an even more urgent need for new techniques and automated tools that can help us transform this data into useful information and knowledge Like the first edition voted the most popular data mining book by KD Nuggets readers this book explores concepts and techniques for the discovery of patterns hidden in large data sets focusing on issues relating to

their feasibility usefulness effectiveness and scalability However since the publication of the first edition great progress has been made in the development of new data mining methods systems and applications This new edition substantially enhances the first edition and new chapters have been added to address recent developments on mining complex types of data including stream data sequence data graph structured data social network data and multi relational data A comprehensive practical look at the concepts and techniques you need to know to get the most out of real business data Updates that incorporate input from readers changes in the field and more material on statistics and machine learning Dozens of algorithms and implementation examples all in easily understood pseudo code and suitable for use in real world large scale data mining projects Complete classroom support for instructors at www.mkp.com/datamining2e companion site [Flexible Automation and Intelligent Manufacturing: Manufacturing Innovation and Preparedness for the Changing World Order](#) Yi-Chi Wang, Siu Hang Chan, Zih-Huei Wang, 2024-12-12 This book reports on cutting edge research and developments in manufacturing giving a special emphasis to solutions for the Changing World Order It covers advances in manufacturing processes and systems applications of AI and machine learning in manufacturing sustainable manufacturing strategies quality management in industry 4 0 and topics in ergonomics engineering education and project management Based on the proceedings of the 33rd International Conference on Flexible Automation and Intelligent Manufacturing FAIM2024 held on June 23 26 2024 in Taichung Taiwan this second volume of a 2 volume set provides academics and professionals with extensive technical information on trends and technologies in manufacturing yet it also discusses challenges and practice oriented experience in all the above mentioned areas **Decision Trees for Analytics Using SAS Enterprise Miner** Barry De Ville, Padraic Neville, 2019-07-03 Decision Trees for Analytics Using SAS Enterprise Miner is the most comprehensive treatment of decision tree theory use and applications available in one easy to access place This book illustrates the application and operation of decision trees in business intelligence data mining business analytics prediction and knowledge discovery It explains in detail the use of decision trees as a data mining technique and how this technique complements and supplements data mining approaches such as regression as well as other business intelligence applications that incorporate tabular reports OLAP or multidimensional cubes An expanded and enhanced release of Decision Trees for Business Intelligence and Data Mining Using SAS Enterprise Miner this book adds up to date treatments of boosting and high performance forest approaches and rule induction There is a dedicated section on the most recent findings related to bias reduction in variable selection It provides an exhaustive treatment of the end to end process of decision tree construction and the respective considerations and algorithms and it includes discussions of key issues in decision tree practice Analysts who have an introductory understanding of data mining and who are looking for a more advanced in depth look at the theory and methods of a decision tree approach to business intelligence and data mining will benefit from this book **Proceedings of the 2022 3rd International Conference on Artificial Intelligence and Education (IC-ICAIE**

2022) Bob Fox, Chuan Zhao, Marcus T. Anthony, 2024-03-14 This is an open access book The 2022 3rd International Conference on Artificial Intelligence and Education ICAIE 2022 will be held in Chengdu China during June 24-26 2022 The meeting focused on the new trends in the development of artificial intelligence and education under the new situation and jointly discussed how to empower and promote the high quality development of artificial intelligence and education An ideal platform to share views and experiences with industry experts The conference invites experts and scholars in the field to conduct wonderful exchanges based on their own research results based on the development of the times The themes are around artificial intelligence technology and applications intelligent and knowledge based systems information based education intelligent learning advanced information theory and neural network technology software computing and algorithms intelligent algorithms and computing and many other topics [Meta-Learning in Decision Tree Induction](#) Krzysztof Grąbczewski, 2013-09-11 The book focuses on different variants of decision tree induction but also describes the meta learning approach in general which is applicable to other types of machine learning algorithms The book discusses different variants of decision tree induction and represents a useful source of information to readers wishing to review some of the techniques used in decision tree learning as well as different ensemble methods that involve decision trees It is shown that the knowledge of different components used within decision tree learning needs to be systematized to enable the system to generate and evaluate different variants of machine learning algorithms with the aim of identifying the top most performers or potentially the best one A unified view of decision tree learning enables to emulate different decision tree algorithms simply by setting certain parameters As meta learning requires running many different processes with the aim of obtaining performance results a detailed description of the experimental methodology and evaluation framework is provided Meta learning is discussed in great detail in the second half of the book The exposition starts by presenting a comprehensive review of many meta learning approaches explored in the past described in literature including for instance approaches that provide a ranking of algorithms The approach described can be related to other work that exploits planning whose aim is to construct data mining workflows The book stimulates interchange of ideas between different albeit related approaches

Comparative Analysis of Deterministic and Nondeterministic Decision Trees Mikhail Moshkov, 2020-03-14 This book compares four parameters of problems in arbitrary information systems complexity of problem representation and complexity of deterministic nondeterministic and strongly nondeterministic decision trees for problem solving Deterministic decision trees are widely used as classifiers as a means of knowledge representation and as algorithms Nondeterministic strongly nondeterministic decision trees can be interpreted as systems of true decision rules that cover all objects objects from one decision class This book develops tools for the study of decision trees including bounds on complexity and algorithms for construction of decision trees for decision tables with many valued decisions It considers two approaches to the investigation of decision trees for problems in information systems local when decision trees can use only attributes from

the problem representation and global when decision trees can use arbitrary attributes from the information system For both approaches it describes all possible types of relationships among the four parameters considered and discusses the algorithmic problems related to decision tree optimization The results presented are useful for researchers who apply decision trees and rules to algorithm design and to data analysis especially those working in rough set theory test theory and logical analysis of data This book can also be used as the basis for graduate courses

Artificial Intelligence Methods in the Environmental Sciences Sue Ellen Haupt, Antonello Pasini, Caren Marzban, 2008-11-28 How can environmental scientists and engineers use the increasing amount of available data to enhance our understanding of planet Earth its systems and processes This book describes various potential approaches based on artificial intelligence AI techniques including neural networks decision trees genetic algorithms and fuzzy logic Part I contains a series of tutorials describing the methods and the important considerations in applying them In Part II many practical examples illustrate the power of these techniques on actual environmental problems International experts bring to life ways to apply AI to problems in the environmental sciences While one culture entwines ideas with a thread another links them with a red line Thus a red thread ties the book together weaving a tapestry that pictures the natural data driven AI methods in the light of the more traditional modeling techniques and demonstrating the power of these data based methods

Method of Decision Tree Applied in Adopting the Decision for Promoting a Company Cezarina Tofan, 2016 The decision can be defined as the way chosen from several possible to achieve an objective An important role in the functioning of the decisional informational system is held by the decision making methods Decision trees are proving to be very useful tools for taking financial decisions or regarding the numbers where a large amount of complex information must be considered They provide an effective structure in which alternative decisions and the implications of their choice can be assessed and help to form a correct and balanced vision of the risks and rewards that may result from a certain choice For these reasons the content of this communication will review a series of decision making criteria Also it will analyse the benefits of using the decision tree method in the decision making process by providing a numerical example On this basis it can be concluded that the procedure may prove useful in making decisions for companies operating on markets where competition intensity is differentiated
