The Deceptive Universe:

The Deceptive Universe Jerrold Thacker, 1983 **Is Your Belief System Your Own?** Maria Theresa Costa, **The Path Less Traveled** Jerrold Thacker, 2015-08-25 Since man first began looking at the stars he's wondered about their origins and his own. Modern astronomers have explained the beginnings of the universe with the Big Bang Theory in which all matter erupted from a single explosion billions of years ago. As the universe's mysteries have deepened, astronomers have introduced an increasing number of concepts which defy understanding such as an expanding and accelerating universe, galaxies at incredible distances, massive and unexplainable black holes, quasars, and bazars with unbelievable distances and energy, dark matter, and dark energy which supposedly comprise 96% of the universe but can't be found, pulsars which defy logic, and many other phenomena which stretch our imagination. Amateur astronomer Jerrold Thacker calls the Big Bang Theory and its accompanying scientific theories preposterous. Instead, he proposes an alternate explanation for what we observe based not on the prevailing Doppler Effect and the concept that the universe's galaxies are receding from our own with increasing velocity, but on the Tired Light Effect based on Einstein's General Theory of Relativity which shows that gravitational fields in outer space slow light, causing a color shift in light produced by distant objects. This new and totally different view of the universe explores the Tired Light Effect on what we observe in the universe. The author dismisses much of what is currently espoused by the astronomical community. Instead, he points to Einstein's predictions and their integral role in explaining every phenomenon hypothesized by modern astronomers, revealing the wonder of the cosmos without a big bang or expanding universe.
