[The Educated Woman](#) Katharina Rowold, 2011-02-09 The Educated Woman is a comparative study of the ideas on female nature that informed debates on women s higher education in the late nineteenth and early twentieth centuries in three western European countries Exploring the multi layered roles of science and medicine in constructions of sexual difference in these debates the book also pays attention to the variety of ways in which contemporary feminists negotiated and reconstituted conceptions of the female mind and its relationship to the body While recognising similarities Rowold shows how in each country the higher education debates and the underlying conceptions of women s nature were shaped by distinct historical contexts

**The Science of Woman** Ornella Moscucci, 1990 Arguing that the definition of femininity proposed by gynecological science is a cultural product of a wider more political context this study traces the science s origins from its emergence as a predictable science of man in the late 18th century through its professional development up to 1929

*Outsider Scientists* Oren Harman, Michael R. Dietrich, 2013-12-11 *Outsider Scientists* describes the transformative role played by outsiders in the growth of the modern life sciences Biology which occupies a special place between the exact and human sciences has historically attracted many thinkers whose primary training was in other fields mathematics physics chemistry linguistics philosophy history anthropology engineering and even literature These outsiders brought with them ideas and tools that were foreign to biology but which when applied to biological problems helped to bring about dramatic and often surprising breakthroughs This volume brings together eighteen thought provoking biographical essays of some of the most remarkable outsiders of the modern era each written by an authority in the respective field From Noam Chomsky using linguistics to answer questions about brain architecture to Erwin Schrödinger

contemplating DNA as a physicist would to Drew Endy tinkering with Biobricks to create new forms of synthetic life the outsiders featured here make clear just how much there is to gain from disrespecting conventional boundaries Innovation it turns out often relies on importing new ideas from other fields Without its outsiders modern biology would hardly be recognizable
