Openshaw, 2013-03-09 The 1990s have seen some remarkable changes in geographical information GI provision and
computer technology that have impacted on many of the activities that constitute planning in all its different forms However
relatively few texts in the field of geographical information systems GIS and planning have been published since Henk
Scholten and John Stillwell edited Geographical Information Systems for Urban and Regional Planning in 1990 This volume
seeks to redress the balance by showing how GI of various types is being used in urban physical environmental socio
economic and business planning contexts at local regional and national scales with the assistance of GIS and modelling
methods and how the uses of GI and GI technologies have evolved over the last decade During this period a number of
meetings took place in Europe in different locations organised initially by European Geographical Information Systems EGIS
1990 94 and more recently by the Joint European Conference and Exhibition JEC on Geographical Information 1995 97 These
meetings brought together members of the GI community from across the world to discuss GI research and GIS applications
One of the Special Interest Groups associated with the JEC gatherings was that on Geographical Information and Planning
and several of the contributions in this book have their origins in papers presented to the group s meetings

Planning ,1998-07 *Production Research 1993* V. Orpana,A. Lukka,1993 Research into industrial production is a varied and far reaching activity and cannot be said to be the province of any one particular science Industrial production research is a subject which cannot be covered in any one or even several branches of study expertise in other fields of science is also needed for this research The guiding principle on which industrial production is based is to manufacture marketable quality products using the factors of production as economically as possible Only in this way can profitability be assured and future production be guaranteed Industrial centres have sprung up throughout the world in which the latest technological achievements have been applied with great success The 322 papers in this volume review current issues of production in an increasingly demanding working environment Current problems are analysed which can only be solved through worldwide production research which will also further industrial development The effects of both industrial production and the production of energy on the natural environment are examined in detail The articles presented in this book emphasise the need for flexibility and concentration of forces in production research in order to propose and implement approaches and solutions which can be adapted to

continuously changing circumstances It is hoped that the readers of this volume will consider production research as an ongoing and open project which requires multidisciplinary cooperation to cope with the many open questions on future industrial development throughout the world **HR Focus** ,1994 *Pro File* American Institute of Architects,2000
