Manufacturing Servitization in the Asia-Pacific Jing Wang, Michitaka Kosaka, Ke Xing, 2015-10-24 This book systematically describes the development of manufacturing servitization in the Asia Pacific region

It offers a practical and theoretical reference guide to the manufacturing companies in the Asia Pacific region which is now a major global manufacturing center. Servitization is a fairly recent trend in the manufacturing industry; some American and European manufacturing companies have successfully transformed to service-oriented manufacturing companies over the past three decades, while Asian Pacific region companies have only more recently begun to recognize the importance of servitization. But some Asia Pacific region companies have been exploring approaches in the same direction of servitization without being aware of the concept. One unique aspect of this book is the fact that it takes into consideration the social and cultural influences of this region. It introduces companies within and beyond the region as well as the academic world to the current state of development of the Asia Pacific manufacturing industry and its servitization trend. This is the first book that focuses on this topic, one which is of great theoretical and practical importance.

China: Innovative Green Development Angang Hu, 2016-11-25. This book is particularly concerned with China's path to green development and how it can be understood, exploring questions such as how the goal of Chinese-led green development can be achieved. The book provides systematic explanations of the theory of green development, exploring its background, its theoretical basis, the areas it covers, the stages it encompasses, and the constraining and favorable factors involved. We see how humankind is at a period of transition from the traditional black industrial civilization to a modern green ecological civilization. The author gives a profound critique of the traditional Western model of development, provides a comprehensive analysis of the crisis and the opportunities presented by green development, and depicts the grand goal of green modernization in a creative, bold, forward-looking manner. A three-step strategy to design and promote green development is proposed. Readers will discover why China must become an innovator, practitioner, and leader of green development and how green planning is an important means to establish green development. The book explores how local governments can become green innovation practitioners and how enterprises can become the main arena of green development. This book is a creative and innovative work that will appeal to scholars interested in the long-term development of humankind in general and China in particular. It also serves well as a green development textbook, presenting related scientific knowledge and important information for decision-making in a concise, easy-to-understand form.
