Best Organic Farming:

Basics of Integrated Farming Systems Sohan Singh Walia, Tamanpreet Kaur, 2023-12-04 This volume on Integrated Farming Systems explains the diverse components that can be included in the agriculture sector. It is a practical guide to increasing a farm's productivity, profitability, and sustainability. The use of integrated farming systems has become essential with the growing population and the decreased availability of land, resulting in the need to optimize the existing resources. By combining different farm enterprises like dairy, poultry, and fishery, farmers can achieve vertical expansion and increase their income and employment opportunities. This comprehensive guide covers all aspects of integrated farming systems, from the different components that can be included to the benefits of recycling crop residues and the by-products within the farm. With practical advice for small and marginal farmers, this book offers a roadmap for improving productivity and ensuring balanced nutrition for farm families. The book is suitable for a vast audience, from a farmer looking to increase profits and sustainability to a student of agriculture at the graduate or post-graduate level or a researcher in the field of farming systems. It is an essential resource for reaping the benefits of integrated farming systems.

Earthworms and Vermicomposting Sohan Singh Walia, Tamanpreet Kaur, 2024-01-10 This book explains the lifecycle of earthworms, biological features, multiplication of worms, species of earthworms that are suitable for vermicomposting, different sources of vermicompost, nutrient recovery, and different procedures for making of vermicompost and importance of application of vermicompost in cereal, fruit, and vegetable crops. The tremendous increase in population, urbanization, industrialization, and agricultural production results in accumulation of quantities of solid wastes. This has created a serious problem in the environment. In order to dispose this waste safely, it should be converted effectively. This is achieved by bio-composting and vermicomposting of farm, urban, and agro-industrial waste. It is being increasingly realized that composting is an environment-friendly process that converts a wide variety of wastes into valuable agricultural inputs. Compost is an excellent source of humus and plant nutrients, on application of which it improves soil biophysical properties and organic matter status of the soil. India generates about 350 million tonnes of agricultural waste every year. Agricultural wastes include crop residues, weeds, leaf litter, sawdust, forest waste, and livestock waste. Under appropriate conditions, worms eat agricultural waste and reduce the volume by 40 to 60%. Vermicompost produced by the activity of earthworms is rich in macro and micro nutrients, vitamins, growth hormones, enzymes such as proteases, amylases, lipase, cellulase, and chitinase, and immobilized microflora. This book will assist farmers, students, and scholars to guide them about the lifecycle of earthworms, biological features, multiplication of worms, species of earthworms that are suitable for vermicomposting, and different procedures for making of vermicompost. This book will also benefit students of agriculture at the graduate and post-graduate level as students have a designated course on vermicomposting.

Best Practices on Agricultural Crops Production and Resource Management in the Highlands of the Philippines' Cordillera Robert L. Domoguen, 2008

Poverty and Climate Change Fitzroy B. Beckford,2018-09-10 Most if not all of the global biogeochemical cycles on the earth have been broken or are at dangerous tipping points These broken cycles have expressed themselves in various forms as soil degradation and depletion ocean acidification global warming and climate change The best proposal for an organic solution to fixing the myriad broken cycles is a deliberate investment in solutions that first acknowledge the historic roles played by both the subjugated peoples and the economic beneficiaries of the environmental exploitations of the past Ever since Europeans made contact with the West a series of global circumstances including the genocide of the indigenous people of the Americas the enslavement and global subjugation of Africans and the emergence of Western concepts of trade dominance and capitalism have led to deleterious impacts on the global biogeochemical cycles Addressing the broken biogeochemical cycles should be done with a clear understanding that it was not only human subjects which were subjugated but also land water and air These three global stores must be replenished from the ideological position that poverty is not simply the absence of money but is also the lack of access to non polluting energy sources to clean air devoid of runaway greenhouse gasses and to local conditions devoid of climate change instabilities With this in mind the global powerbrokers can enter into a new deal with developing nations shifting the paradigm toward a new ecological approach that rewards good behavior and sets new standards of worldwide relations based on ecologic inclusivity rather than the exclusive economic arrangements currently in order Harnessing a forward thinking approach to analyzing the current global environmental crisis this book will be of great interest to students and scholars of sustainable development political ecology sustainable agriculture climate change and environmental justice
