CHURCH THOMASVILLE NC Processing of Polymer Matrix Composites P.K. Mallick, 2017-10-06 Polymer matrix

composites are finding increasing number of applications due to their high weight saving potential as well as unique

characteristics such as high strength to density ratio fatigue resistance high damping factor and freedom from corrosion

While many textbooks are available on the mechanics of polymer matrix composites few cover their processing Processing of

Polymer Matrix Composites fills this gap The book focuses on the major manufacturing processes used for polymer matrix

composites and describes process details process parameters and their effects on properties and process induced defects and

analytical and experimental methods used for understanding process conditions The book describes fibers thermosetting and

thermoplastic polymers and interface characteristics that are important from the standpoint of both design and processing It

also emphasizes the applications of process fundamentals for both continuous fiber and short fiber polymer matrix composites In addition the book considers quality inspection methods tooling and manufacturing costs and environmental and safety issues

Composite Sheet Forming D. Bhattacharyya,1997-06-18 Sheet forming is the most common process used in metal forming and is therefore constantly being adapted or modified to suit the needs of forming composite sheets Due to the increasing availability of various types of fibre reinforced polymeric sheets especially with thermoplastic matrices the scope of use of such materials is rapidly expanding in the automobile building sports and other manufacturing industries beyond the traditional areas of aerospace and aircraft applications This book contains twelve chapters and attempts to cover different aspects of sheet forming including both thermoplastic and thermosetting materials In view of the expanded role of fibre reinforced composite sheets in the industry the book also describes some non traditional applications processes and analytical techniques involving such materials The first chapter is a brief introduction to the principles of sheet metal forming The next two chapters introduce the various forms of materials manufacturing techniques and the fundamentals of computer simulation Chapter 4 describes the different aspects of thermoforming of continuous fibre reinforced thermoplastics and the following chapter studies the shear and frictional behaviour of composite sheets during forming Chapter 6 explores the possibility of applying the grid strain analysis method in continuous fibre reinforced polymeric sheets The next two chapters address fundamental concepts and recent developments in finite element modelling and rheology Chapter 9 introduces the theory of bending of thermoplastic composite sheets and shows a novel way of determining both longitudinal and transverse viscosities through vee bend tests A significant expansion in the usage of composite materials is taking place in biomedical areas Chapter 10 discusses the thermoforming of knitted fabric reinforced thermoplastics for load bearing and anisotropic bio implants The final chapter introduces roll forming a commonly used rapid manufacturing process for sheet metals and discusses the possibility of applying it economically for continuous reinforced thermoplastic sheets
