Kumazawa Banzan: Governing the Realm and Bringing Peace to All below Heaven Kumazawa Banzan, 2020-11-26 Kumazawa Banzan's 1619-1691 Responding to the Great Learning Daigaku wakumon stands as the first major writing on political economy in early modern

Japanese history John A Tucker's translation is the first English rendition of this controversial text to be published in eighty years. The introduction offers an accessible and incisive commentary including detailed analyses of Banzan's text within the context of his life as well as broader historical and intellectual developments in East Asian Confucian thought. Emphasizing parallels between Banzan's life events such as his relief efforts in the Okayama domain following devastating flooding and his later writings advocating compassionate government environmental initiatives and projects for growing wealth, Tucker sheds light on Banzan's main objective of governing the realm and bringing peace and prosperity to all below heaven. In *Responding to the Great Learning*, Banzan was doing more than writing a philosophical commentary; he was advising the Tokugawa shogunate to undertake a major reorganization of the polity or face the consequences.

Buddhism and Science Donald S. Lopez Jr., 2009-05-15. Beginning in the nineteenth century and continuing to the present day, both Buddhists and admirers of Buddhism have proclaimed the compatibility of Buddhism and science. Their assertions have ranged from modest claims about the efficacy of meditation for mental health to grander declarations that the Buddha himself anticipated the theories of relativity, quantum physics, and the big bang more than two millennia ago. In *Buddhism and Science*, Donald S. Lopez Jr. is less interested in evaluating the accuracy of such claims than in exploring how and why these two seemingly disparate modes of understanding the inner and outer universe have been so persistently linked. Lopez opens with an account of the rise and fall of Mount Meru, the great peak that stands at the center of the flat earth of Buddhist cosmography and which was interpreted anew once it proved incompatible with modern geography. From there, he analyzes the way in which Buddhist concepts of spiritual nobility were enlisted to support the notorious science of race in the nineteenth century. Bringing the story to the present, Lopez explores the Dalai Lama's interest in scientific discoveries as well as the implications of research on meditation for neuroscience. Lopez argues that by presenting an ancient Asian tradition as compatible with and even anticipating scientific discoveries, European enthusiasts and Asian elites have sidestepped the debates on the relevance of religion in the modern world that began in the nineteenth century and still flare today. As new discoveries continue to reshape our understanding of mind and matter, *Buddhism and Science* will be indispensable reading for those fascinated by religion, science, and their often vexed relation.

Metaphors of the Ancient World Fabian Horn, 2025-03-17. The objective of this edited volume is to bring together contributions from the fields of Ancient Greek and Latin Philology that apply the cognitive linguistic framework of Conceptual Metaphor Theory (CMT) to ancient texts and other source material. The individual chapters are unified by this shared theoretical approach, occasionally supplemented by further theoretical frameworks and methodologies from literary criticism and the cognitive sciences. The scope of the volume is broad, and there is no restriction to specific literary genres or periods of history. Discussion ranges from the Archaic Greek epic poetry of Homer to the early imperial philosophical treatises of Seneca the Younger. Topics treated along the way include Presocratic philosophy, Ancient Greek comedy, and Roman love elegy. This collection of research by theoretically aligned Classicists thereby showcases the
