Surviving the Islamic State Austin Knuppe, 2024-07-02 How did ordinary Iraqis survive the occupation of their communities by the Islamic State How did they decide whether to stay or flee to cooperate or resist Based on an original survey from Baghdad alongside key interviews in the field this book offers an insightful account of how Iraqis in different areas of the country responded to the rise and fall of the Islamic State Austin J Knuppe argues that people adopt survival repertoires a variety of social practices tools organized routines symbols and rhetorical strategies to navigate wartime violence and detect threats He traces how repertoires varied among different communities over the course of the conflict In areas insulated from insurgent control such as cosmopolitan Baghdad local residents had the flexibility to support coalition forces while also voicing opposition to government policies For Iraqis in rural communities confronting insurgent control collaboration and resistance entailed significant risks In Sunni majority communities in the western desert passive acquiescence and active cooperation temporarily insulated Iraqis from insurgent victimization For ethnic and religious minorities in the north however flight or resistance proved the only viable options In many communities local residents mobilized neighborhood self defense groups and militias loosely aligned with coalition forces once the tides turned against the Islamic State Beyond contributing to academic and policy debates about civilian protection during wartime *Surviving the Islamic State* foregrounds everyday people s experiences while modeling an ethical approach for conducting field research in conflict affected communities

Rosemary L. Hopcroft,Martin Fieder,Susanne Huber,2024-03-26 This is the first book to fully examine from an evolutionary
point of view the association of social status and fertility in human societies before during and after the demographic
transition In most nonhuman social species social status or relative rank in a social group is positively associated with the
number of offspring with high status individuals typically having more offspring than low status individuals However humans
appear to be different As societies have gotten richer fertility has dipped to unprecedented lows with some developed
societies now at or below replacement fertility Within rich societies women in higher income families often have fewer
children than women in lower income families Evolutionary theory suggests that the relationship between social status and
fertility is likely to be somewhat different for men and women so it is important to examine this relationship for men and
women separately When this is done the positive association between individual social status and fertility is often clear in
less developed pre transitional societies particularly for men Once the demographic transition begins it is elite families
particularly the women of elite families who lead the way in fertility decline Post transition the evidence from a variety of
developed societies in Europe North America and East Asia is that high status men particularly men with high personal
income do have more children on average than lower status men The reverse is often true of women although there is
evidence that this is changing in Nordic countries The implications of these observations for evolutionary theory are also
discussed This book will be of interest to students and researchers in the social sciences with an interest in evolutionary
sociology evolutionary anthropology evolutionary psychology demography and fertility Reports of Cases Heard and
