Values of Non-atomic Games Robert J. Aumann, Lloyd S. Shapley, 1971 **Values of Non-atomic Games, Iii: Values and Derivatives**, 1970 A non atomic game is a special kind of infinite person game in which no individual player has significance such games have recently attracted attention as models for mass phenomena in economics In this Memorandum the characteristic function of the game is extended to a space that includes not only the ordinary coalitions measurable sets of players but also certain ideal coalitions intuitively sets to which a player can belong at any intensity between 0 and 1 The value of the game is then redefined in terms of the derivatives of this extended function following the principle that a player's value is based upon his incremental worth to coalitions The close relation between this definition and those previously considered is established Author **Values of Non-atomic Games: The axiomatic approach** Robert J. Aumann, 1968

Shapley, 1971 Values of Non-atomic Games, Part I: the Axiomatic Approach Robert J. Aumann, Lloyd S. Shapley, RAND CORP SANTA MONICA CALIF., 1968 First of a series of studies concerned with the value of participation in a non atomic game The value of an n person game is a function that associates to each player a number that intuitively speaking represents an a priori opinion of what it is worth to him to play in the game A non atomic game is a special kind of infinite person game in which no individual player has any special significance Such games have recently attracted attention as models for mass phenomena in economics The extended definition of value is formulated in terms of simple axiomatic properties such as symmetry linearity and positivity Questions of existence and uniqueness are considered For a certain class of games where the non atomic measures are vectors rather than scalars an explicit formula is derived that enables the value to be calculated directly Author Values of Non-atomic Games Robert J. Aumann, 1970 *Values of Non-atomic Games* Robert J. Aumann, 1970 **Values of Non-atomic Games** Robert J. Aumann, 1969 **Values of Non-atomic Games I** R.J. Aumann, L.S. Shapley, 1969 **Values of Non-atomic Games**, 1971 Values of Non-atomic Games Robert J. Aumann, 1969 The paper reports the second study in a series concerned with the value of participation in a non atomic game A non atomic game is a special type of infinite person game in which no individual player has significant influence on the outcome The work develops the concept of mixing value and presents a new approach based

on mixing transformations A program is outlined for imposing a probability measure on the space of all measurable orders Some consideration is given to the asymptotic approach in which a game with a continuum is treated as a limit of games with finitely many players It is significant that all values defined in the axiomatic mixing and asymptotic approaches possess a common diagonal property

Values of Non-atomic Games, 5 R. J. Aumann, L. S. Shapley, 1971 Values of Non-Atomic Games Robert J. Aumann, Lloyd S. Shapley, 2015-03-08 The Shapley value of a finite multi person game associates to each player the amount he should be willing to pay to participate This book extends the value concept to certain classes of non atomic games which are infinite person games in which no individual player has significance It is primarily a book of mathematics a study of non additive set functions and associated linear operators Originally published in 1974 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905
