### ABSTRACT

*At this stage in the development of linguistics, a special place is occupied by the theory of variability, which for a long time has attracted the close attention of linguists. In order to understand the principles of development of diachrony and synchronicity of the functioning of the language, it is necessary to understand the deep and comprehensive study of variance. In the last decade, the subject of interest of most linguists is the problem of variance and variability, and in theoretical terms it has not yet been studied.*

A.D. Travkina argues that the

term "variation" should be used to denote the phenomenon or concept itself, and "variability" - to the results of the action of this process [4, p. 78].

### DISSCUSION

A number of scholars (O. B. Sirotina, N.N. Semenyuk, F.P. Filin) consider variability from the standpoint of formal variation, variation of the plan of expression with the identity (proximity) of the content plan. Linguists distinguish broad and narrow interpretations of variance [3, p. 63-64]. In their understanding, variability in a broad sense represents inconsistency in meaning and modification. Opposing a variant to an invariant does not find its necessity at this stage. Synchrony in the narrow sense of variability is a characteristic of the way of existence and functioning of language units. A dichotomy is characterized by the quality of abstraction abstracted from a specific linguistic unit.

Likewise, the phenomenon of linguistic variance (variation) is defined in science as "a
