Things New and Strange G. Wayne Clough, 2019-05-01 *Things New and Strange* chronicles a research quest undertaken by G Wayne Clough the first secretary of the Smithsonian Institution born in the South Soon after retiring from the Smithsonian Clough decided to see what the Smithsonian collections could tell him about South Georgia where he had spent most of his childhood in the 1940s and 1950s The investigations that followed which began as something of a quixotic scavenger hunt expanded as Clough discovered that the collections had many more objects and documents from South Georgia than he had imagined These objects illustrate important aspects of southern culture and history and also inspire reflections about how South Georgia has changed over time Clough s discoveries animal plant fossil and rock specimens along with cultural artifacts and works of art not only serve as a springboard for reflections about the region and its history they also bring Clough s own memories of his boyhood in Douglas Georgia back to life Clough interweaves memories of his own experiences such as hair raising escapes from poisonous snakes and selling boiled peanuts for a nickel a bag at the annual auction of the tobacco crop with anecdotes from family lore which launches an exploration of his forebears and their place in South Georgia history In following his engaging and personal narrative we learn how nonspecialists can use museum archives and how family community and natural history are intertwined

Hydrogen & Fuel Cells Michael Frank Hordeski,2020-12-17 The hydrogen car has been proposed as the solution to our oil problems but how would it work and what potential problems associated with it This book addresses these questions and provides specifics about current developments toward a hydrogen based energy infrastructure It offers the reader an informed look at the current state of fuel cell power and transportation technology and where it s headed *Power Generation and the Environment* Anco S. Blazev,2021-01-07 Natural and man made changes in the environment create a very complex picture This book analyzes this picture and provides snapshots of different areas of interest and to make suggestions for future work on cleaning and stabilizing the Earth s environment Starting with conventional energy generation and moving on to renewable energies this book analyzes and calculates their environmental impact and the lesser known aspects of their cradle to grave life cycle such as the irreversible environmental damage done during the manufacturing of solar and wind equipment and during the installation operation and decommissioning of large scale hydro solar and wind power plants

Nuclear Power or a Promise Lost Edward T. Burns,2020-05-01 This book captures the status of current electrical energy markets including the principal forces affecting decisions on selecting an energy source It represents a seminal work that lays out the electrical energy decision tree for selecting an energy source in a world that is on the verge of catastrophic global warming because of the choices that have been made in the name of cheap energy The impetus for this book includes the dire need to mitigate continued anthropogenic causes of global warming by turning to carbon free energy sources Nuclear energy represents such a carbon free energy source and could be a partial solution to the existential threat facing future society the threat of a warming planet and its consequential catastrophic effects on future generations The world is at a crossroads in human interaction with their environment The effects of radiation and the relationship of nuclear power to nuclear weapons are both discussed in an understandable and compelling manner Nuclear energy is contrasted with other energy sources including fossil fuels and renewable energy sources regarding the risks and benefits imposed by each Important personalities and world events that shaped nuclear power s development are recounted The historical origins of nuclear power are outlined and the continued impetus to include nuclear power as part of the electric grid energy mix is assessed exposing the obstacles and road blocks to the continued use of nuclear power Specific attention is paid to revealing the causes and lessons learned from the three severe accidents in commercial nuclear plants TMI 2 Chernobyl and Fukushima An extensive discussion of nuclear waste disposal is provided as part of the decision tree for energy selection The context for the future of nuclear power as a viable energy source is illuminated by the current battle between economic growth and the harm created by burning fossil fuels The status of the world s climate and projections for the disruptive effects of global warming on future populations migration economics and world strife are debated against the backdrop of an increasing world population and the drive by developing nations to achieve economic parity with the industrialized nations Within the context of increased world strife the quest by nations to obtain nuclear weapons is also discussed The steps taken

by the world to limit nuclear weapons proliferation are examined with emphasis on potential links between nuclear power generation and access to nuclear weapons The final chapter discusses the moral responsibility of current generations with respect to future generations specifically the applicability of intergenerational equity in political and social decision making regarding the actions that add to global warming and those risk averse actions that can be taken to minimize global warming
