*Science and Technology Education and Communication* Maarten C. A. van der Sanden, Marc J. de Vries, 2016-11-25 Science technology education on the one hand and communication on the other are to a large extent still separate worlds and many opportunities for synergy and cross fertilisation are yet unused This divide is unfortunate since educators need communication skills and communicators often use aspects of education in their strategies Moreover innovation processes in both domains ask for education and communication insights and skills Therefore scholars and practitioners in both domains must seek connections and synergy by exchanging insights and ideas This book discusses the shared aims of science technology education and communication such as science literacy and engagement as well as common processes and challenges such as social learning social design and professionalisation and assessment Aims processes and challenges that inspire enhance and deepen the education and communication synergy from a theoretical and practical side If one reads the various chapters and reflects on them from one s own perspective as a scholar or practitioner the question is no longer if cross fertilisation and synergy are needed but when are we seriously going to take up this challenge together This book aims to initiate the dialogue that the situation in the development of the topic requires at this point

Connecting People with Technology George Hayhoe,Helen Grady,2020-11-25 This book explores five important areas where technology affects society and suggests ways in which human communication can facilitate the use of that technology Usability has become a foundational discipline in technical and professional communication that grows out of our rhetorical roots which emphasize purpose and audience As our appreciation of audience has grown beyond engineers and scientists to lay users of technology our appreciation of the diversity of those audiences in terms of age geography and other factors has similarly expanded We are also coming to grips with what Thomas Friedman calls the flat world a paradigm that influences how we communicate with members of other cultures and speakers of other languages And because most of the flatteners are either technologies themselves or technology driven technical and professional communicators need to leverage these technologies to serve global audiences Similarly we are inundated with information about world crises involving health and safety issues These crises are driven by the effects of terrorism the aging population HIV AIDS and both human made and natural disasters These issues are becoming more visible because they are literally matters of life and death Furthermore they are of special concern to audiences that technical and professional communicators have little experience targeting the shapers of public policy seniors adolescents and those affected by disaster Biotechnology is another area that has provided

new roles for technical and professional communicators We are only beginning to understand how to communicate the science accurately without either deceiving or panicking our audience We need to develop a more sophisticated understanding of how communication can shape reactions to biotechnology developments Confronting this complex network of issues we re challenged to fashion both our message and the audience s perceptions ethically Finally today s corporate environment is being shaped by technology and the global nature of business Technical and professional communicators can play a role in capturing and managing knowledge in using technology effectively in the virtual workplace and in understanding how language shapes organizational culture
