Technology And Global Change:

Technology and Global Change Arnulf Grübler, 2003-10-16 This is the first book to comprehensibly describe how technology has shaped society and the environment over the last 200 years. It will be useful for researchers as a textbook for graduate students, for people engaged in long term policy planning in industry and government, for environmental activists, and for the wider public interested in history, technology, or environmental issues. *Department of Energy's plan for climate change technology programs : hearing*, **Technology and Global Change** Arnulf Grübler, 1992 **Technology and Global Change** Grubler Arnulf, 2009 **Handbook of Climate Change and India** Navroz Dubash, 2012-03-15 How do policymakers, businesses, and civil society in India approach the challenge of climate change? What do they believe global climate negotiations will achieve and how? And how are Indian political and policy debates internalizing climate change? Relatively little is known globally about internal climate debate in emerging industrializing countries, but what happens in rapidly growing economies like India's will increasingly shape global climate change outcomes. This Handbook brings together prominent voices from India, including policymakers, politicians, business leaders, civil society activists, and academics, to build a composite picture of contemporary Indian climate politics and policy. One section lays out the range of positions and substantive issues that shape Indian views on global climate negotiations. Another delves into national politics around climate change. A third looks at how climate change is beginning to be internalized in sectoral policy discussions over energy, urbanization, water, and forests. The volume is introduced by an essay that lays out the critical issues shaping climate politics in India and its implications for global politics. The papers show that within India, climate change is approached primarily as a developmental challenge and is marked by efforts to explore how multiple objectives of development, equity, and climate mitigation can simultaneously be met. In addition, Indian perspectives on climate negotiations are in a state of flux. Considerations of equity across countries and a focus on the primary responsibility for action of wealthy countries continue to be central, but there are growing voices of concern on the impacts of climate change on India. How domestic debates over climate governance are resolved in the coming years and the evolution of India's global negotiation stance are likely to be important inputs toward creating shared understandings across countries in the years ahead and identifying ways forward. This volume on the Indian experience with climate change and development is a valuable contribution to both purposes.

Climate Technology and Law in the Anthropocene Leonie Reins, Alexander Zahar, 2025-07-08 Available open access digitally under CC BY-NC-ND licence. As climate change accelerates, our window for action is closing. To stay within the Anthropocene, an epoch in which humankind as the dominant force shaping the planet retains a degree of control over the destructive processes it has unleashed, global warming must be kept below 2 Celsius. This book explores the unprecedented technological and legal changes required to achieve this. Featuring contributions from leading experts, the essays examine the intersection of technology, law, and environmental values, offering diverse viewpoints on navigating the Anthropocene.

Revealing the controversies of rapid technological adoption and legal reform this is a crucial analysis of a complex future whose many dangers for our society are barely understood Earth Observations and Global Change Decision Making, 1991 The bibliography contains 294 bibliographic citations and abstracts of relevant reports articles and documents announced in Scientific and Technical Aerospace Reports STAR and International Aerospace Abstracts IAA

Global Climate Change - The Technology Challenge Frank Princiotta, 2011-05-21 In order to avoid the potentially catastrophic impacts of global warming the current 3% CO₂ global emission growth rate must be transformed to a 1 to 3% declining rate as soon as possible This will require a rapid and radical transformation of the world's energy production and end use systems The current generation of energy technologies are not capable of achieving the level of mitigation required Next generations of renewable low carbon generation and end use technologies will be needed This book quantifies the mitigation challenge It then considers the status of key technologies needed to protect the planet from serious climate change impact Current and emerging technologies are characterized for their mitigation potential status of development and potential environmental impacts Power generation mobile sources industrial and building sectors are evaluated in detail The importance and unique challenges for rapidly developing countries such as China and India are discussed Current global research and development efforts for key technologies are discussed It is concluded that it will be necessary to substantially upgrade and accelerate the current worldwide R&D effort on both emerging energy technologies and those enabling technologies needed to improve mitigation effectiveness and economics It will also be necessary to carefully evaluate the potential environmental characteristics of next generation technologies to avoid unacceptable health and ecological impacts Finally given the monumental technological challenge associated with transforming the world's energy system geoengineering options are evaluated since if successfully deployed they have the potential to allow more time for the necessary energy system transformation This book on Climate Change not only gives a clear picture of the problem but suggests many of the pitfalls in solving it and recommends strongly a research program to fill the gaps in our knowledge It is a most useful reference book for all aspects of the problem William D Ruckelshaus Madrona Venture Group Evergreen Venture

Global Change and Water Resources Management, 1998 **Technological Change and the Environment** Arnulf Grübler, 2010-09-30 Much is written in the popular literature about the current pace of technological change But do we have enough scientific knowledge about the sources and management of innovation to properly inform

policymaking in technology dependent domains such as energy and the environment While it is agreed that technological change does not fall from heaven like autumn leaves the theory data and models are deficient The specific mechanisms that govern the rate and direction of inventive activity the drivers and scope for incremental improvements that occur during technology diffusion and the spillover effects that cross fertilize technological innovations remain poorly understood In a work that will interest serious readers of history policy and economics the editors and their distinguished contributors offer a unique single volume overview of the theoretical and empirical work on technological change Beginning with a survey of existing research they provide analysis and case studies in contexts such as medicine agriculture and power generation paying particular attention to what technological change means for efficiency productivity and reduced environmental impacts The book includes a historical analysis of technological change an examination of the overall direction of technological change and general theories about the sources of change The contributors empirically test hypotheses of induced innovation and theories of institutional innovation They propose ways to model induced technological change and evaluate its impact and they consider issues such as uncertainty in technology returns technology crossover effects and clustering A copublication of Resources for the Future RFF and the International Institute for Applied Systems Analysis IIASA
