Determinants of Information Technology Outsourcing Lawrence Loh,2016-10-26 Excerpt from Determinants of Information Technology Outsourcing A Cross Sectional Analysis It is a truism that information technology it has transcended its established administrative support function and has moved toward playing a more central role of business operations see for instance 14 18 25 Within this tradition research efforts have focused on the use of IT to in uence the boundaries of a firm with its suppliers buyers and other intermediaries 6 8 There is however a glaring lack of research emphasis on the role of IT infrastructure as a component of the firm boundary itself In other words while IT has been considered a critical mechanism of multi organizational business relationships the research stream has treated the governance of IT infrastructure to be within one single firm s hierarchy Such an approach fails to recognize the recent trend towards managing a firm s IT infrastructure through a variety of governance mechanisms with other firms About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
