Tectonic Geomorphology:

Tectonic Geomorphology Douglas W. Burbank, Robert S. Anderson, 2011-11-02 Tectonic geomorphology is the study of the interplay between tectonic and surface processes that shape the landscape in regions of active deformation and at time scales ranging from days to millions of years Over the past decade recent advances in the quantification of both rates and the physical basis of tectonic and surface processes have underpinned an explosion of new research in the field of tectonic geomorphology Modern tectonic geomorphology is an exceptionally integrative field that utilizes techniques and data derived from studies of geomorphology seismology geochronology structure geodesy stratigraphy meteorology and Quaternary science While integrating new insights and highlighting controversies from the ten years of research since the 1st edition this 2nd edition of *Tectonic Geomorphology* reviews the fundamentals of the subject including the nature of faulting and folding the creation and use of geomorphic markers for tracing deformation chronological techniques that are used to date events and quantify rates geodetic techniques for defining recent deformation and paleoseismologic approaches to calibrate past deformation Overall this book focuses on the current understanding of the dynamic interplay between surface processes and active tectonics As it ranges from the timescales of individual earthquakes to the growth and decay of mountain belts this book provides a timely synthesis of modern research for upper level undergraduate and graduate earth science students and for practicing geologists Additional resources for this book can be found at www.wiley.com/go/burbank_geomorphology

Tectonics, Climate, and Landscape Evolution Sean D. Willett, 2006-01-01 The Liwu River runs a short course its

channel head at the water divide in Taiwan's Central Range is a mere 35 km from its outflow into the Pacific Ocean. But in those short 35 km the Liwu has carved one of the world's geographic wonders, the spectacular Taroko Gorge with marble and granite walls soaring nearly 1000 m above the river channel. Taroko Gorge was a fitting venue for a 2003 Penrose Conference that addressed the coupled processes of tectonics, climate, and landscape evolution. The young mountains, extreme weather, and dramatic landforms provided an appropriate backdrop to wide-ranging discussions of geomorphic processes, climate, and meteorology, sediment generation and transport, the effects of erosion on tectonics, and new analytical and modeling tools used to address these processes and problems. This volume's papers extend that discussion, reaching across fields that have experienced rapid advances in the past decade. Publisher's website

Tectonics Evgenii Sharkov, 2018-05-16 This book is devoted to different aspects of tectonic researches. New results and interpretations are presented here for diverse tectonic settings. Most of the chapters include up-to-date materials of detailed geological investigations, often combined with geophysical data which can help understand more clearly the essence of mechanisms of different tectonic processes. Some chapters are devoted to the tectonic evolution of regions: East Antarctica, East Kazakhstan, Mongolo-Okhotsk orogenic belt, and others have dealt with the different aspects of tectonic events: influence of detachment structural deformation on pore structure evolution in shales, evolution of drainage in response to brittle-ductile dynamics and surface processes, soft sediment deformation structures triggered by the modern earthquakes, and post-opening deformation history of the Japan Sea back-arc basin.

High-resolution Seafloor Survey and Applications Ziyin Wu, Fanlin Yang, Yong Tang, 2020-12-07 This book focuses on the survey technology, post-processing technology, mapping technology, and scientific application of the submarine topography and geomorphology in detail. High-resolution submarine geomorphology is a frontier branch of marine geology and marine surveying and mapping which provides a direct basis to study the seabed surface to understand the tectonic movement and submarine evolution. In the past two decades, high-resolution submarine geomorphology with high precision multi-beam echo sounding, side-scan sonar, and sub-bottom profiler as the major techniques is developing very quickly and is one of the frontiers of international marine science and technology. These high techniques promote the traditional submarine geomorphology to high resolution and quantitative research. At present, high-resolution submarine geomorphology is widely used in the delimitation of the continental shelf, the international seabed resources survey, marine engineering, and marine military applications. In order to facilitate readers to understand how to acquire and apply scientific research based on submarine topographic data, it highlights the combination of theory, technology, and scientific application. This book is useful as a reference for professional and technical personnel in related fields and also as a textbook for both graduate and undergraduate students as well.

Geoinformatics A. Krishna Sinha, 2006-01-01 The science of informatics in the broadest sense has been several thousands of years in the making With the recent emergence of large storage devices and high speed processing of data it has become possible to organize vast amounts of data as digital products with ontologic tags and concepts for smart queries Coupling this computational capability with earth science data defines the emerging field of geoinformatics Since the science of geology was established several centuries ago observations led to conclusions that were integrative in concept and clearly had profound implications for the birth of geology As disciplinary information about Earth becomes more voluminous the use of geoinformatics will lead to integrative science based discoveries of new knowledge about planetary systems Twenty one research papers co authored by 96 researchers from both earth and computer sciences provide the first ever organized presentation of the science of informatics as it relates to geology Readers will readily recognize the vast intellectual content represented by these papers as they seek to address the core research goals of geoinformatics Publisher's website
