The Life and Death of Planet Earth Peter D. Ward,Donald Brownlee,2003 Planet Earth is middle aged Science has worked hard to piece together the story of the evolution of our world up to this point but only recently have we developed the understanding and the tools to describe the entire life cycle of a planet Ward and Brownlee a geologist and an astronomer respectively combine their knowledge of how the critical sustaining systems of our planet evolve through time with their understanding of the life cycles of stars and solar systems to tell the story of the second half of Earth's life The process of evolution will essentially reverse itself life as we know it will subside until only the simplest forms remain Eventually they too will disappear The oceans will evaporate the atmosphere will degrade and as the sun slowly expands Earth itself will eventually meet a fiery end From publisher description *The Life and Death of Stars* Kenneth R.
