Security Guide for IBM i V6.1 Jim Cook, Juan Carlos Cantalupo, MinHoon Lee, IBM Redbooks, 2009-05-29. The IBM i operating system, formerly IBM i5 OS, is considered one of the most secure systems in the industry. From the beginning, security was designed as an integral part of the system. The System i platform provides a rich set of security features and services that pertain to the goals of authentication, authorization, integrity, confidentiality, and auditing. However, if an IBM Client does not know that a service such as a virtual private network (VPN) or hardware cryptographic support exists on the system, it will not use it. In addition, there are more and more security auditors and consultants who are in charge of implementing corporate security policies in an organization. In many cases, they are not familiar with the IBM i operating system but must understand the security services that are available. This IBM Redbooks publication guides you through the broad range of native security features that are available within IBM i Version and release level 6.1. This book is intended for security auditors and consultants, IBM System Specialists, Business Partners, and clients to help you answer first-level questions concerning the security features that are available under IBM i. The focus in this publication is the integration of IBM i 6.1 enhancements into the range of security facilities available within IBM i up through Version release level 6.1. IBM i 6.1 security enhancements include Extended IBM i password rules and closer affinity between normal user IBM i operating system user profiles and IBM service tools user profiles, Encrypted disk data within a user Auxiliary Storage Pool (ASP) Tape, data save and restore encryption under control of the Backup Recovery and Media Services for i5 OS BRMS product 5761 BR1, Networking security enhancements including additional control of Secure Sockets Layer (SSL) encryption rules and greatly expanded IP intrusion detection protection and actions, DB2 for i5 OS built-in column encryption expanded to include support of the Advanced Encryption Standard (AES) encryption algorithm to the already available Rivest Cipher 2 (RC2) and Triple DES Data Encryption Standard (TDES) encryption algorithms. The IBM i V5R4 level IBM Redbooks publication *IBM System i Security Guide for IBM i5 OS Version 5 Release 4* SG24 6668 remains available.

Usability bei Web-Applikationen Bettina Thurnher, 2006-04-06. Inhaltsangabe: Einleitung. In einer sich immer schneller wandelnden und hochkomplexen Arbeitsumgebung, die gerade von Neuerungen im Bereich der Informationstechnologie geprägt wird, ist es die Bestrebung des Usability Engineering, das Arbeiten mit Benutzerschnittstellen für den Anwender einfach zu gestalten. Die Usability-Forschung ist eine Disziplin, welche viele Ansätze in sich vereint. Dies sind z.B. Arbeitswissenschaften, Kognition, Ergonomie, Psychologie, Informatik und Technik. Aus diesem Grund bietet sie zahlreiche Möglichkeiten zur interdisziplinären Zusammenarbeit dieser Wissenschaften. Durch die Anwendung einstmals für die Software

Entwicklung geschaffener Kriterien für anwenderfreundliche Schnittstellengestaltung lässt sich Usability auch auf die Prozessmodellierung anwenden. Da die heutige Arbeitswelt durch das Zusammenarbeiten in interdisziplinären Teams geprägt ist, werden Prozessdarstellungen, die von Personen aus den verschiedensten Funktionsbereichen interpretiert und verstanden werden können, immer wichtiger. Anwenderfreundliche Prozessdarstellungen leisten einen erheblichen Beitrag zur Kommunikation des Prozessgedankens in Unternehmen. Denn um ein Unternehmen prozessorientiert führen und ausrichten zu können, müssen die Mitarbeiter verstehen, welchen Nutzen sie von der Prozessorganisation haben. Ohne eine verständliche Darstellung und Kommunikation der Geschäftsprozesse ist dies nur sehr schwer zu erreichen, wenn nicht gar unmöglich. Zusammenfassung: In der vorliegenden Arbeit soll die fehlende Verbindung zwischen den beiden Disziplinen Prozessmodellierung und Usability/Anwenderfreundlichkeit aufgezeigt werden. Durch die Möglichkeiten, die die digitale Informationsübertragung bietet, entstehen neue Anforderungen an die Prozessmodellierung als internes Kommunikationsmedium in Unternehmen. Um diesen Anforderungen gerecht zu werden, müssen Prozessdarstellungen für eine heterogene Anwendergruppe verständlich und intuitiv verwendbar sein. Diese Ansprüche werden durch die Darstellung von Geschäftsprozessen mittels des Wasserfallmodells nicht erfüllt. Aus diesem Grund wurde im Rahmen dieser Arbeit ein Modell entwickelt, das die Prozessmodellierung unter der Einbeziehung von verschiedenen Anwendergruppen realisiert. Im Gegensatz zum Wasserfallmodell, bei dem von einer linearen Entwicklung eines Geschäftsprozesses ausgegangen wird, verfolgt das Modell zur anwenderfreundlichen Prozessdarstellung einen iterativ inkrementellen
