## Telescopes In Space:

*Space Telescopes* Andrew Langley, 2019-05-01 Over the last 400 years telescope technology has come a long way From dying stars to burping black holes take a look at the most exciting discoveries in deep space *Telescopes in Space* Zdeněk Kopal, 1970 *First Space Telescope* Morey, Allan, 2025-11-12 Telescopes help scientists peer into the night sky to study stars planets and beyond Space telescopes are launched into space to give an even bigger picture of what could be out there First Space Telescope looks at how these instruments can turn blurry dots into full focus But how does this sensitive equipment get into space in the first place Are there any risks once it s there And how have space telescopes changed the way people see their place in the universe The Firsts in Outer Space series takes readers on a journey to the stars and beyond *Astrophysics in the Next Decade* Harley A. Thronson, Massimo Stiavelli, Alexander Tielens, 2009-08-29 NASA s James Webb Space Telescope JWST planned for operation in about five years will have the capability to investigate and answer some of the most challenging questions in astronomy Although motivated and designed to study the very early Universe the performance of the observatory s instruments over a very wide wavelength range will allow the world s scientific community unequaled ability to study cosmic phenomena as diverse as small bodies in the Solar System and the formation of galaxies As part of preparation to use JWST a conference was held in Tucson Arizona in 2007 that brought together astronomers from around the world to discuss the mission other major facilities that will operate in the coming decade and major scientific goals for them This book is a compilation of those presentations by some of the leading researchers from all branches of astronomy This book also includes a pre history of JWST describing the lengthy process and some of the key individuals that initiated early work on the concepts that would evolve to become the premier space observatory of the next decade **The James Webb Space Telescope** Charles River, 2022-05-28 On April 24 1990 the Space Shuttle Discovery lifted off from Kennedy Space Center on the Space Shuttle Program s 35th mission but this was no ordinary mission In its payload bay Discovery was carrying the Hubble Space Telescope with the objective of putting the telescope into orbit Despite the costs and initial defects the Hubble telescope has been a remarkably successful project furthering astronomers understanding of the universe more than any other telescope or instrument in history During its decades in orbit the versatile telescope has taken high resolution images of objects billions of light years away giving astronomers a look at the early universe Along the way it has also taken the most detailed pictures of the solar system captured the most striking images of star creation and supernovae and uncovered evidence of phenomena like gamma ray bursts and dark energy What made Hubble so crucial is that by escaping Earth s atmosphere the telescope s views eliminated limitations and interruptions that are a natural part of land based telescopes Land based telescopes are larger cheaper and easier to maintain They are also not vulnerable to the risk of colliding with space junk or fast moving small meteoric materials However even at 11 000 feet ground based installations have historically faced atmospheric distortion The

atmosphere blurs the light when a picture is taken through it and since the 1960s science has increasingly leaned toward space based instruments at first attaching them to balloons and sending them aloft to carry them above Earth's lower atmosphere. The atmospheric distortion problem with ground telescopes has been largely ameliorated in recent years by the development of adaptive optics. 1 A ground based facility can now produce an image as sharp as that of a space telescope. This makes the division of labor between the two a bit clearer. The space instrument provides a wider field of view in addition to fine optical resolution and it is no longer necessary to use visual to near visual 2 telescopes operating in space. In fact optical telescope photos are available in high quality for the general public based on NASA technology. Boston Micromachines claims to provide clearer pictures of celestial objects in deep space than ever before with deformable mirrors that compensate for atmospheric disturbances and instrument misalignments. 3 Still scientists need to build space telescopes not just for high resolution pictures but also to work in wavelengths one cannot observe from Earth. From space telescopes that work in parts of the non visual wavelengths provide the only means of viewing x rays gamma rays and extreme ultraviolet rays. Most importantly they provide excellent platforms for observing in the far infrared 4 spectrum. The Hubble telescope working in space less than 400 miles above the Earth's surface produced photos of galaxies previously unseen as they existed only 500 million years before the Big Bang. It was fortuitous that Hubble outlived its anticipated lifespan by many years because the launch of its successor the James Webb Space Telescope was delayed by 15 years. A launch date of 2007 for the James Webb Space Telescope was the original agenda but two years prior a major redesign 5 became necessary. In another instance a ripped sunshield during a practice deployment 6 set the project back followed by a series of significant cost overruns.

**Hubble** Lars Lindberg Christensen, Robert A. Fosbury, 2006-09-28 The book enables you to peer deeply into the wonders of the Universe in full color with unprecedented clarity and resolution. Only Hubble Heritage picture book endorsed by the two leading space agencies NASA and ESA. Close up photos within book are unmatched in competing texts because the images have been prepared straight from the data by scientists to reach the highest possible quality. *Space Telescopes* Neil English, 2016-11-08 Space telescopes are among humankind's greatest scientific achievements of the last fifty years. This book describes the instruments themselves and what they were designed to discover about the Solar System and distant stars. Exactly how these telescopes were built and launched and the data they provided is explored. Only certain kinds of radiation can penetrate our planet's atmosphere which limits what we can observe. But with space telescopes all this changed. We now have the means to see beyond Earth using ultraviolet microwave and infrared rays X rays and gamma rays. In this book we meet the pioneers and the telescopes that were built around their ideas. This book looks at space telescopes not simply chronologically but also in order of the electromagnetic spectrum making it possible to understand better why they were made.

**SPACE TELESCOPES** Christie Marlowe, 2016-06-13 For centuries people have used telescopes to look up at the stars. Today powerful telescopes in space are still helping scientists learn more about the stars and galaxies around

Tucker,Karen Tucker,1986 **Astronomy from Space** James Cornell,Paul Gorenstein,1983 Since the Space Age began a quarter century ago astronomers have been able to reach out and often touch celestial bodies that formerly could only be dimly viewed from afar Probes have flown by or landed on many of the planets Astronauts have made direct observations from Earth orbit and on the Moon Most important a host of satellites in Earth orbit have recorded the emissions of X ray infrared and ultraviolet radiation from distant sources normally invisible beneath the atmosphere And when the Space Telescope goes aloft man's vision of the cosmos will be extended further still The essays in this book describe the

results of twenty five years of space observation summarize what has been learned so far and speculate on the possibilities that are now within grasp Leo Goldberg provides a point of departure by describing what astronomy was like when it was limited to peering at the night sky through Earthbound telescopes Goldberg also expresses the hopes astronomers had for discovery in the anticipated Age of Space The chapters that follow reveal what has been discovered about the geological features of the inner planets James W Head III the Moon John A Wood the giant planets as seen during the close encounters of the Voyagers Bradford A Smith and the Sun Randolph H Levine The next chapters document the first ventures into deep space and describe the understanding of a previously invisible universe revealed by ultraviolet sources Andrea K Dupree and X ray sources within the Milky Way Jonathan E Grindlay and beyond Paul Gorenstein George B Field who chaired the National Academy of Science committee charged with developing priorities for U S astronomical research in the 1980s discusses the future of space astronomy An epilogue by Ursula B Marvin describes a planet body that until recently had never been seen from the vantage point of space the Earth itself The editors and most of the contributors are affiliated with the Harvard Smithsonian Center for Astrophysics James Cornell also edited with Alan P Lightman *Revealing the Universe Prediction and Proof in Astronomy* MIT Press paperback [The Hubble Space Telescope](#) David J. Shayler, David M. Harland, 2015-11-25 The highly successful Hubble Space Telescope was meant to change our view and understanding of the universe Within weeks of its launch in 1990 however the space community was shocked to find out that the primary mirror of the telescope was flawed It was only the skills of scientists and engineers on the ground and the daring talents of astronauts sent to service the telescope in December 1993 that saved the mission For over two decades NASA had developed the capabilities to service a payload in orbit This involved numerous studies and the creation of a ground based infrastructure to support the challenging missions Unique tools and EVA hardware supported the skills developed in crew training that then enabled astronauts to complete a demanding series of spacewalks Drawing upon first hand interviews with those closely involved in the project over thirty years ago this story explains the development of the servicing mission concept and the hurdles that had to be overcome to not only launch the telescope but also to mount the first servicing mission a mission that restored the telescope to full working order three years after its launch saved the reputation of NASA and truly opened a new age in understanding of our place in space This is not just a tale of space age technology astronauts and astronomy It is also a story of an audacious scientific vision and the human ingenuity and determination to overcome all obstacles to make it possible *Hubble Space Telescope From Concept to Success* is a story of an international partnership dedicated teamwork and a perfect blend of human and robotic space operations that will inspire people of all ages The subsequent servicing missions that enabled the telescope to continue its scientific program beyond its 25th year in orbit are described in a companion volume *Enhancing Hubble's Vision Servicing a National Treasure* **Universe in Focus** Stuart Clark, 1997 **Space Telescopes and Instruments**, 1998 *Hubble Space Telescope* Space Telescope Science Institute (U.S.), 1992
