as hopeless The Mathematical Preliminaries Redux section of the book is a special treat which presents basic techniques of probability theory that have become prominent since the original preliminaries were discussed in Volume 1 As in every volume of this remarkable series the book includes hundreds of exercises that employ Knuth's ingenious rating system making it easy for readers of varying degrees of mathematical training to find challenges suitable to them Detailed answers are provided to facilitate self study Professor Donald E Knuth has always loved to solve problems In Volume 4B he now promotes two brand new and practical general problem solvers namely 0 the Dancing Links Backtracking and 1 the SAT Solver To use them a problem is defined declaratively 0 as a set of options or 1 in Boolean formulae Today's laptop computers heavily armoured with very high speed processors and ultra large amounts of memory are able to run either solver for problems having big input data Each section of Volume 4B contains a multitudinous number of tough exercises which help make understanding surer Happy reading Eiiti Wada an elder computer scientist UTokyo Donald Knuth may very well be a great master of the analysis of algorithms but more than that he is an incredible and tireless storyteller who always strikes the perfect balance between theory practice and fun Volume 4B Combinatorial Algorithms Part 2 dives deep into the fascinating exploration of search spaces which is quite like looking for a needle in a haystack or even harder to prove the absence of a needle in a haystack where actions performed while moving forward must be meticulously undone when backtracking It introduces us to the beauty of dancing links for removing and restoring the cells of a matrix in a dance which is both simple to implement and very efficient Christine Solnon Department of Computer Science INSA Lyon Register your book for convenient access to downloads updates and or corrections as they become available *Dr. Dobb's Journal of Computer Calisthenics & Orthodontia*, 1982 **The Art of Computer Programming** Donald E.
