Hement, Vladimir S. Lysenko, Alexei N. Nazarov, 2012-12-06 This proceedings volume contains the contributions of the speakers who attended the NATO Advanced Research Workshop on Perspectives Science and Technologies for Novel Silicon on Insulator Devices held at the Sanatorium Pushcha OLEma Kyiv th Ukraine from It to 15 October 1998 This meeting was the second NATO Silicon on Insulator SOL Workshop to be held in st the Ukraine where the first meeting Gurzuf Crimea 1 to 4th November 1994 focussed upon the physical and technical problems to be addressed in order to exploit the advantages of incorporating SOL materials in device and sensor technologies On this occasion emphasis was placed upon firstly promoting the use of SOL substrates for a range of novel device and circuit applications and secondly addressing the economic issues of incorporating SOL processing technologies and device technologies within the framework of the resources available within the laboratories and factories of the Newly Independent States NIS The primary goal of both workshops has been the breaking of the barriers that inhibit closer collaboration between scientists and engineers in the NATO countries and the NIS Indeed it was a pleasure for attendees at the first meeting to renew acquaintances and for the first time attendees to make new contacts and enjoy the warm hospitality offered by our hosts in Kyiv An outcome was the forging of new links and concrete proposals for future collaborations **Insulating Films on Semiconductors** M. Schulz, G. Pensl, 2013-03-12 The INFOS 81 Conference on Insulating Films on Semiconductors was held at the University of Erlangen NURNberg in Erlangen from 27 to 29 April 1981 This conference was a sequel to the first conference INFOS 79 held in Durham INFOS 81 attracted

170 participants from universities research institutes and industry Attendants were registered from 15 nations The biannual topical conference series will be continued by INFOS 83 to be held in Eindhoven The Netherlands in April 1983 The conference proceedings include all the invited Y and contrlDUtea 42 papers presented at the meeting The topics range from the basic physical understanding of the properties of insulating films and their interface to semiconductors to the discussion of stability and dielectric strength as well as growing and deposition techniques which are relevant for technical applications Strong emphasis was given to the semiconductor silicon and its native oxide however sessions on compound semiconductors and other insulating films also raised strong interest The proceedings survey the present state of our understanding of the system of insulating films on semiconductors As a new aspect of the topic the properties of semiconductors deposited and laser processed on insulating films was included for the first time

Science and Technology of Semiconductor-On-Insulator Structures and Devices Operating in a Harsh Environment Denis Flandre,Alexei N. Nazarov,Peter L.F. Hemment,2006-05-06

This proceedings volume archives the contributions of the speakers who attended the NATO Advanced Research Workshop on Science and Technology of Semiconductor On Insulator Structures and Devices Operating in a Harsh Environment held at the Sanatorium Pusch Ozerna th th Kyiv Ukraine from 25 to 29 April 2004 The semiconductor industry has maintained a very rapid growth during the last three decades through impressive technological achievements which have resulted in products with higher performance and lower cost per function After many years of development semiconductor on insulator materials have entered volume production and will increasingly be used by the manufacturing industry The wider use of semiconductor especially silicon on insulator materials will not only enable the benefits of these materials to be further demonstrated but also will drive down the cost of substrates which in turn will stimulate the development of other novel devices and applications In itself this trend will encourage the promotion of the skills and ideas generated by researchers in the Former Soviet Union and Eastern Europe and their incorporation in future collaborations

Materials and Process Characterization Norman G. Einspruch,Graydon B. Larrabee,2014-12-01 VLSI Electronics Microstructure Science Volume 6 Materials and Process Characterization addresses the problem of how to apply a broad range of sophisticated materials characterization tools to materials and processes used for development and production of very large scale integration VLSI electronics This book discusses the various characterization techniques such as Auger spectroscopy secondary ion mass spectroscopy X ray topography transmission electron microscopy and spreading resistance The systematic approach to the technologies of VLSI electronic materials and device manufacture are also considered This volume is beneficial to materials scientists chemists and engineers who are commissioned with the responsibility of developing and implementing the production of materials and devices to support the VLSI era

New Insulators Devices and Radiation Effects ,1999-02-11 Silicon technology today forms the basis of a world wide multi billion dollar component industry The reason for this expansion can be found not only in the physical properties of silicon but also in

the unique properties of the silicon silicon dioxide interface However silicon devices are still subject to undesired electrical phenomena called instabilities These are due mostly to the imperfect nature of the insulators used to the not so perfect silicon insulator interface and to the generation of defects and ionization phenomena caused by radiation The problem of instabilities is addressed in this volume the third of this book series Vol 3 updates and supplements the material presented in the previous two volumes and devotes five chapters to the problems of radiation matter and radiation device interactions The volume will aid circuit manufacturers and circuit users alike to relate unstable electrical parameters and characteristics to the presence of physical defects and impurities or to the radiation environment which caused them *Insulating Films on Semiconductors* J. Warren, 1997-06-30 This book is devoted to the continuing research and development of thin dielectric films for optical and microelectronic applications Although thermal SiO₂ has been the dominant dielectric for thin films in microelectronic applications for many years there is a growing need for low dielectric constant materials for interlevel dielectrics less capacitive cross talk and reduced delay and high dielectric constant materials to minimize the space and maximize the capacitance of storage devices such as DRAMs With the demands put forth by the microelectronics community this field is expected to develop significantly in the near future Also featured is the

growing area involving the structure and characterization of buried SiO_2 layers formed by O ion implantation or the Smart Cut Unibond process. These techniques are evolving into viable methods for producing commercial silicon on insulator substrates for device applications requiring radiation hardness, high speed and low power performance and high temperature operation.
