Schreck,2013-03-14 User adaptive or personalized systems take individual character istics of their current users into account and adapt their behavior ac cordingly Several empirical studies demonstrate their benefits in areas like education and training online help for complex software dynamic information delivery provision of computer access to people with dis abilities and to some extent information retrieval Recently personal ized systems have also started to appear on the World Wide Web where they are primarily used for customer relationship management The aim hereby is to provide value to customers by serving them as individuals and by offering them a unique personal relationship with the business Studies show that web visitors indeed spend considerably more time at personalized than at regular portals and view considerably more web pages Personalized sites in general also draw more visitors and turn more visitors into buyers Personalization therefore would look like a win win technology for both consumers and online businesses However it has a major down side in order to be able to exhibit personalized behavior user adaptive systems have to collect considerable amounts of personal data and lay them in stock for possible future usage Moreover the collection of

information about the user is often performed in a relatively inconspic uous manner such as by monitoring users web navigation behavior in order not to distract users from their tasks   *User Modeling 2005* Liliana Ardissono,Paul Brna,Antonija Mitrovic,2005-08-25 The 33 revised full papers and 30 poster summaries presented together with papers of 12 selected doctoral consortium articles and the abstracts of 3 invited lectures were carefully reviewed and selected from 160 submissions The book offers topical sections on adaptive hypermedia affective computing data mining for personalization and cross recommendation ITS and adaptive advice modeling and recognizing human activity multimodality and ubiquitous computing recommender systems student modeling user modeling and interactive systems and Web site navigation support
