White,IBM Redbooks,2011-10-26 In a growing number of organizations policies are the key mechanism by which the capabilities and requirements of services are expressed and made available to other entities The goals established and driven by the business need to be consistently implemented managed and enforced by the service oriented infrastructure expressing these goals as policy and effectively managing this policy is fundamental to the success of any IT and application transformation First a flexible policy management framework must be in place to achieve alignment with business goals and consistent security implementation Second common reusable security services are foundational building blocks for SOA environments providing the ability to secure data and applications

Consistent IT Security Services that can be used by different components of an SOA run time are required Point solutions are not scalable and cannot capture and express enterprise wide policy to ensure consistency and compliance In this IBM Redbooks publication we discuss an IBM Security policy management solution which is composed of both policy management and enforcement using IT security services We discuss how this standards based unified policy management and enforcement solution can address authentication identity propagation and authorization requirements and thereby help organizations demonstrate compliance secure their services and minimize the risk of data loss This book is a valuable resource for security officers consultants and architects who want to understand and implement a centralized security policy management and entitlement solution

Zoltek Jr.,Margaret Ticknor,IBM Redbooks,2014-04-18 Throughout the history of the IT industry integration has been an important part of most projects Whether it is integration of transactions data or processes each has challenges and associated patterns and antipatterns In an age of mobile devices social networks and cloud services and big data analytics integration is more important than ever but the scope of the challenge for IT projects has changed Partner APIs social networks physical sensors and devices all of these and more are important sources of capability or insight It is no longer sufficient to integrate resources under control of the enterprise because many important resources are in the ecosystem beyond enterprise boundaries With this as the basic tenet we address these questions What are the current integration patterns that help enterprises become and remain competitive How do you choose when to use which pattern What is the topology for a composable business And how do you accelerate the process of implementation through intelligent choice of supporting integration middleware This IBM Redbooks publication guides integration practitioners and architects in choosing integration patterns and technologies
