Users View Of The Internet:

The User's View of the Internet Harry Bruce, 2002 The User's View of the Internet provides the first comprehensive analysis of public access to the Internet. It considers the evolution of the Internet through the lens of use and using. It will appeal to Internet stakeholders who need to know more about the impact of the network on their audience: market clients, users, or constituencies. These stakeholders include business, government, Internet service providers, digital service product developers, librarians, media and publishing professionals, educators, academics, and students. *Computers, Phones, and the Internet* Robert Kraut, Malcolm Brynin, Sara Kiesler, 2006-07-06 During the past decade, technology has become more pervasive, encroaching more and more on our lives. Computers, cell phones, and the internet have an enormous influence not only on how we function at work but also on how we communicate and interact outside the office. Researchers have been documenting the effect that these types of technology have on individuals, families, and other social groups. Their work addresses questions that relate to how people use computers, cell phones, and the internet; how they integrate their use of new technology into daily routines; and how family function, social relationships, education, and socialization are changing as a result. This research is being conducted in a number of countries by scientists from a variety of disciplines who publish in very different places. The result is that it is difficult for researchers and students to get a current and coherent view of the research literature. This book brings together the leading researchers currently investigating the impact of information and communication technology outside of the workplace. Its goal is to develop a consolidated view of what we collectively know in this fast-changing area; to evaluate approaches to data collection and analysis; and to identify future directions for research. The book will appeal to professionals and students in social psychology, human technology interaction, sociology, and communication.

On The Move to Meaningful Internet Systems 2003: CoopIS, DOA, and ODBASE Zahir Tari, Douglas C. Schmidt, 2003-10-25 Missions in fact also treat an envisaged mutual impact among them. As for the 2002 edition in Irvine, the organizers wanted to stimulate this cross-pollination with a program of shared famous keynote speakers. This year we got Sycara, Ble Soley, and Mylopoulos and encouraged multiple attendance by providing authors with free access to another conference or workshop of their choice. We received an even larger number of submissions than last year for the three conferences: 360 in total and the workshops 170 in total. Not only can we therefore again claim a measurable success in attracting a representative volume of scientific papers, but such a harvest allowed the program committees of course to compose a high-quality cross-section of worldwide research in the areas covered. In spite of the increased number of submissions, the Program Chairs of the three main conferences decided to accept only approximately the same number of papers for presentation and publication as in 2002, i.e., around 1 paper out of every 4-5 submitted. For the workshops, the acceptance rate was about 1 in 2. Also for this reason, we decided to separate the proceedings into two volumes with their own titles, and we are grateful to Springer Verlag for their collaboration in producing these two books. The reviewing process

by the respective program committees was very professional and each paper in the main conferences was reviewed by at least three referees

On the Move to Meaningful Internet Systems: OTM 2013 Conferences Robert Meersman, Herve Panetto, Tharam Dillon, Johann Eder, Zohra Bellahsene, Norbert Ritter, Pieter De Leenheer, Deijing Dou, 2013-09-20 This volume constitutes the refereed proceedings of the confederated international conferences Cooperative Information Systems CoopIS 2013 Distributed Objects and Applications DOA Trusted Cloud 2013 and Ontologies Data Bases and Applications of SEMantics ODBASE 2013 held as part of OTM 2013 in September 2013 in Graz Austria The 47 revised full papers presented together with 6 short papers and 5 keynotes were carefully reviewed and selected from a total of 137 submissions The papers are organized in topical sections on business process management process modelling service management social networking models and schemas technical advances in cloud computing towards trusted cloud computing privacy for the cloud querying and mining semantic information semantic matching and mapping semantic information management semantics in use
