which not only checks temporal constraints but can also be used to develop time plans for workflow execution **eWork and eBusiness in Architecture, Engineering and Construction** Attila Dikbas, 2004-08-15 Biannually since 1994 the European Conference on Product and Process Modelling in the Building and Construction Industry has provided a review of research given valuable future work outlooks and provided a communication platform for future co operative research and development at both European and global levels This volume of special interest t Information Modelling and Knowledge Bases XXV IOS Press, 2014-01-14 Because of our ever increasing use of and reliance on technology and information systems information modelling and knowledge bases continue to be important topics in those academic communities concerned with data handling and computer science As the information itself becomes more complex so do the levels of abstraction and the databases themselves This book is part of the series Information Modelling and Knowledge Bases which concentrates on a variety of themes in the important domains of conceptual modeling design and specification of information systems multimedia information modeling multimedia systems ontology software engineering knowledge and process management knowledge bases cross cultural communication and context modeling Theoretical disciplines including cognitive science artificial intelligence logic linguistics and analytical philosophy also receive attention The selected papers presented here cover many areas of information modeling and knowledge bases including theory of concepts semantic computing data mining context based information retrieval ontological technology image databases temporal and spatial databases document data management software engineering cross cultural computing environmental analysis social networks WWW information management and many others This new issue also contains papers initiated by the panels on Cross cultural Communication with Icons and Images and Conceptual Modelling of Collaboration for Information Systems The book will be of interest to all those interested in advances in research and applications in the academic disciplines concerned **Knowledge Based Automated Software Engineering** Katalina Grigorova, Ivan Stanev, 2012-03-15 The process of developing big information systems is less effective and more resource consuming than software developers expect The most widely disseminated software engineering methods and tools applied through the life cycle of this process are characterised with a low level of process automation insufficient component reusability and dissatisfactory final product flexibility The efficiency of the software development process can be improved with the application of hi tech IT instruments as 1 non formal business model specifications 2 automated verification and modification of the non formal specifications related to predefined standardised knowledge bases both for the domain and IT areas 3 automated generation of the final software product from the verified business model and 4 incorporation of components set for real time monitoring and tuning within the generated software This book presents the authors views on Knowledge Based Automated Software Engineering KBASE It involves the domain scope the implemented research methods tools and applications The KBASE products presented in the book are addressed to the needs of scientists practitioners and students working in the areas of software engineering computer science knowledge
